trag·e·dy (traj'ə·dē) *n. pl.* **·dies** **1** A form of drama in which the protagonist, having some quality of greatness (and, in Greek, Roman, and Renaissance tragedy, in high place) comes to disaster through some flaw (which may be a noble fault) in his nature that interacts with the fabric of events (the plot) to bring about his inevitable downfall or death, the action being managed in a way to produce pity and fear in the spectator and to effect a catharsis of these feelings. The failure to achieve this leads to **tragedy manquée**, which falls short of true tragedy. To the outcome of death or madness usual in ancient and Renaissance tragedy, modern tragedy adds the possibility of frustration and unfulfilment from which there seems no escape. Opposed to *comedy*. **2** A fatal event or course of events; murder, especially one involving dramatic incidents. **3** A very terrible or sorrowful fate or end. **4** The art or theory of acting or composing tragedy. trans- *prefix* **1** Across; beyond; through; on the other side of; as in:

transarctic	**transequatorial**
transborder	**transfrontier**
transchannel	**transisthmian**
transdesert	**transpolar**

In adjectives and nouns of place, the prefix may signify "on the other side of" (opposed to *cis-*) or "across; crossing." Through long usage, certain of these are written as solid words, as *transalpine, transatlantic*; otherwise, words in this class, unless by contrary official usage, are properly written with a hyphen, as in:

trans-American	**trans-Germanic**
trans-Andean	**trans-Himalayan**
trans-Arabian	**trans-Iberian**
trans-Baltic	**trans-Mediterranean**
trans-Canadian	**trans-Siberian**

2 Through and through; changing completely; as in:

trans·act (trans·akt′, tranz-) *v.t.* To carry through; accomplish; do. —*v.i. Rare* To do business. [<L *transactus*, pp. of *transigere* drive through, accomplish <*trans-* through + *agere* drive, do] —**trans·ac′tor** *n.*

Synonyms: accomplish, act, conduct, do, negotiate, perform, treat. There are many acts that one may *do, accomplish*, or *perform* unaided; what he *transacts* is by means of or in association with others; one may *do* a duty, *perform* a vow, *accomplish* a task, but he *transacts* business, since that always involves the agency of others. To *negotiate* and to *treat* are likewise collective acts, but *negotiate* implies deliberation with adjustment of mutual claims and interests, while *transact* implies execution. Nations may *treat* of peace without result, but when a treaty is *negotiated* peace is secured; the citizens of the two nations are then free to *transact* business with one another.

trans·ac·tion (trans·ak′shən, tranz-) *n.* **1** The management of any affair. **2** Something transacted; an affair; a business deal. **3** *pl.* Published reports, as of a society. —**trans·ac′tion·al** *adj.*

Synonyms: act, action, affair, business, deed, doing, proceeding. A man's *acts* or *deeds* may be exclusively his own; his *transactions* involve the agency or participation of others. A *transaction* is something completed; a *proceeding* is or is viewed as something in progress; but since *transaction* is often used to include the steps leading to the conclusion, while *proceedings* may result in *action*, the dividing line between the two words becomes sometimes quite faint. Both *transactions* and *proceedings* are used of the records of a deliberative body, especially when published. See ACT.

Trans-Al·lai Range (trans′ä·lī′) A branch of the Pamir-Alai mountain system on the Kirgiz-Tadzhik S.S.R. border; highest point, 23,382 feet.

tri·en·ni·al (trī·en'ē·əl) *adj.* **1** Taking place every third year. **2** Lasting three years. — *n.* **1** A ceremony or event observed or celebrated every three years; a third anniversary. **2** A plant lasting three years. — **tri·en'ni·al·ly** *adv.*

tri·en·ni·um (trī·en'ē·əm) *n. pl.* **·en·ni·ums** or **·en·ni·a** (-en'ē·ə) A period of three years. [<L < *tri-* three + *annus* a year]

Trier (trir) A city of Rhineland-Palatinate, West Germany, on the Moselle river in the central western part near Luxembourg: English *Treves*, French *Trèves*.

tri·er·arch (trī'ər·ärk) *n.* In Greek antiquity, the captain of a trireme; also, at Athens, one who alone or with others fitted out and maintained a trireme. [<L *trierarchus* <Gk. *triērarchos* < *triērēs* a trireme + *archein* rule]

tri·er·ar·chy (trī'ər·är'kē) *n. pl.* **·chies** **1** The command of a trireme. **2** The fitting out and maintaining of a trireme. **3** The body of trierarchs collectively. [<Gk. *triērarchia* < *triērarchos* TRIERARCH]

Tri·este (trē·est', *Ital.* trē·es'tā) An Italian port on the **Gulf of Trieste**, a NE inlet of the Gulf of Venice; formerly an Austrian port and later part of the Free Territory of Trieste.

Trieste, Free Territory of A former free territory, including the city of Trieste and adjoining portions of Istria, constituted by the Italian-Allied peace treaty of 1947; 298 square miles; in 1954 the smaller part (81 square miles, including the city of Trieste) reverted to Italy, and the larger (217 square miles) passed to Yugoslavia.

tri·e·ter·ic (trī'ə·ter'ik) *adj.* Happening every other year. [<L *trietericus* <Gk. *trietērikos* < *trietēris* a festival celebrated every other year < *tri-* three + *etos* a year]

tri·fa·cial (trī·fā'shəl) *adj.* Trigeminal (def. 2).

tri·fid (trī'fid) *adj.* Divided into three parts or sections; three-cleft. [<L *trifidus* < *tri-* three + *fid-*, stem of *findere* split]

tri·fle (trī'fəl) *v.* **·fled, ·fling** *v.i.* **1** To treat something as of no value or importance; dally: with *with*. **2** To act or speak frivolously or idly; jest. **3** To play; toy. **4** To pass time idly; idle. — *v.t.* **5** To pass (time) in an idle and purposeless way. — *n.* **1** Anything of very little value or importance. **2** A light confection, usually made of alternate layers of macaroons or ladyfingers with sugared fruit, covered with a custard and topped with meringue or whipped cream. **3** A variety of pewter. — **a trifle** Slightly; to a small extent: a *trifle* short. [<OF *truffler*, var. of *truffer* deceive, jeer at < *trufle*, dim. of *trufe* a cheating, mockery; ult. origin unknown] — **trī'fler** *n.*

tri·fling (trī'fling) *adj.* **1** Frivolous. **2** Insignificant. See synonyms under CHILDISH, IDLE, INSIGNIFICANT, LITTLE, RIDICULOUS, VAIN. — **trī'fling·ly** *adv.*

tri·fo·cal (trī·fō'kəl) *adj.* **1** Having three foci. **2** *Optics* Pertaining to or describing a lens ground in three segments, for near, intermediate, and far vision respectively.

tri·fold (trī'fōld) *adj.* Triple.

tri·fo·li·ate (trī·fō'lē·it, -āt) *adj. Bot.* Having three leaves or leaflike processes. Also **tri·fo'li·at'ed.** [<TRI- + FOLIATE]

tri·fo·li·o·late (trī·fō'lē·ə·lāt') *adj. Bot.* Having three leaflets.

tri·fo·li·um (trī·fō'lē·əm) *n.* Any of a genus (*Trifolium*) of small plants of the bean family, the clovers, with trifoliolate leaves, and purple, red, white, or yellow flowers. [<NL <L < *tri-* three + *folium* a leaf]

TRIFORIUM

tri·fo·ri·um (trī·fôr'ē·əm, -fō'rē-) *n. pl.* **·fo·ri·a** (-fôr'ē·ə, -fō'rē·ə) *Archit.* A gallery above the arches of the nave in a church. [<Med. L <L *tri-* three + *foris* a door] — **tri·fo'ri·al** *adj.*

tri·formed (trī'fôrmd') *adj.* **1** Having three forms or shapes. **2** Consisting of three parts or divisions. Also **tri'form.** — **tri·form'i·ty** *n.*

tri·fur·cate (trī·fûr'kāt) *adj.* Three-forked; trichotomous. Also **tri·fur'cat·ed.** — **tri·fur·ca·tion** (trī'fər·kā'shən) *n.*

trig¹ (trig) *adj.* **1** Characterized by tidiness; trim; neat. **2** Strong; sound; firm. **3** In a depreciative sense, correct; precise; prim. **4** Faithful; trustworthy; dependable. **5** Active; alert. **6** Full; inflated. — *v.t.* **trigged, trig·ging** To make trig or neat; dress finely or smartly: often with *out* or *up*. [<ON *tryggr* true, trusty] — **trig'ly** *adv.* — **trig'ness** *n.*

trig² (trig) *v.t.* **trigged, trig·ging** **1** To check, as with a skid; obstruct; stop. **2** To shore; prop. — *n.* A check or brake, as a skid or drag for a wheel. [? <ON *tryggja* make firm]

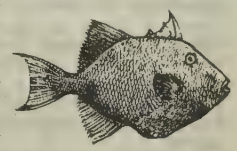
tri·gem·i·nal (trī·jem'ə·nəl) *adj.* **1** Being in three parts; threefold; triple. **2** Of or pertaining to the trigeminus: *trigeminal* neuralgia. — *n.* The trigeminus. [<L *trigeminus* born three at a time < *tri-* three + *geminus* a twin]

tri·gem·i·nus (trī·jem'ə·nəs) *n. pl.* **·ni** (-nī) *Anat.* The fifth cranial or trifacial nerve, the great nerve of sensation for the face and head. [<NL <L. See TRIGEMINAL.]

trig·ger¹ (trig'ər) *n.* **1** The fingerpiece of a gunlock or pistol-lock, for releasing the hammer. **2** A catch or small lever doing similar service in a trap or other mechanism. — **quick on the trigger** **1** Quick to shoot. **2** Quick to act in response to a suggestion; quick-witted; alert. — *v.t.* To cause or precipitate. [Earlier *tricker* <Du. *trekker* < *trekken* pull, tug at]

trig·ger² (trig'ər) *n. Dial.* A skid or trig. [< TRIG² + -ER]

trig·ger·fish (trig'ər·fish') *n. pl.* **·fish** or **·fish·es** A plectognath fish (genus *Balistes*) found mainly in the tropical Pacific region, with an ovate body covered with large, rough scales: named from the triggerlike second spine of the dorsal fin.



TRIGGERFISH
(About 12 inches long)

tri·glyph (trī'glif) *n. Archit.* An ornament in a Doric frieze consisting of a tablet with three parallel vertical channels or glyphs, and standing on each side of the metopes. [<L *triglyphus* <Gk. *triglyphos* thrice grooved < *tri-* three + *glyphē* a carving < *glyphein* carve, engrave]

tri·glyph·ic (trī·glif'ik) *adj.* **1** Pertaining to or consisting of triglyphs. **2** Having three groups of characters or carvings. Also **trī'glyph·al, tri·glyph'i·cal.**

tri·go (trē'gō) *n. Spanish* Wheat.

tri·gon (trī'gon) *n.* **1** A triangle; especially, the triangle of reference used in trilinear coordinates. **2** One of four parts of the zodiac, each consisting of three signs. **3** In Greek and Roman antiquity, a lyre or harp of triangular form. [<L *trigonum* <Gk. *trigōnon*, orig. neut. of *trigōnos* three-angled < *tri-* three + *gōnia* an angle]

trig·o·nal (trig'ə·nəl) *adj.* **1** Pertaining to or in the form of a trigon; triangular; three-cornered. **2** Characterized, in the hexagonal crystal system, by having a principal (vertical) axis of threefold symmetry. Also **trig'o·nous.** — **trig'o·nal·ly** *adv.*

trig·o·nom·e·ter (trig'ə·nom'ə·tər) *n.* **1** An instrument for solving triangles mechanically. **2** *Obs.* An expert in trigonometry.

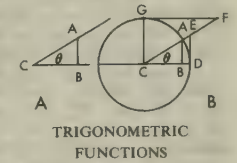
trigonometric functions Certain functions of an angle or arc used in trigonometry. The most commonly used are: sine, cosine, tangent, cotangent, secant, cosecant. In illustration *A* the functions of the angle ∎ are defined as ratios or fractions. They are:

$$\text{sine } \theta = \frac{AB}{AC} \qquad \text{cosecant } \theta = \frac{AC}{AB}$$

$$\text{cosine } \blacksquare = \frac{CB}{AC} \qquad \text{secant } \theta = \frac{AC}{CB}$$

$$\text{tangent } \theta = \frac{AB}{CB} \qquad \text{cotangent } \blacksquare = \frac{CB}{AB}$$

The functions may be represented also as lines by constructing the reference triangle in a circle whose radius is taken as unity, and drawing additional lines as in *B*. The *sine* is then AB, the *cosine* CB, the *tangent* ED, the *cotangent* GF, the *secant* CE, and the *cosecant* CF. These are all spoken of as the sine, cosine, etc., of the arc AD as well as of the angle θ. Other, less common, trigonometric functions are: versed sine, coversed sine, exsecant, and



TRIGONOMETRIC FUNCTIONS

haversine. These functions are expressed as follows:

versed sine θ (or versine θ) = 1 − cosine θ
coversed sine θ (or versed cosine θ) = 1 − sine θ
exsecant θ = secant θ − 1
haversine θ = 1/2 versine θ

trig·o·nom·e·try (trig′ə·nom′ə·trē) *n.* The branch of mathematics that treats of the relations of the sides and angles of triangles and of the methods of applying these relations in the solution of problems involving triangles: widely used in navigation, surveying, etc. [<NL *trigonometria* <Gk. *trigōnon* a triangle + *metron* measure] — **trig·o·no·met·ric** (trig′ə·nō·met′rik) or **·ri·cal** *adj.* — **trig′o·no·met′ri·cal·ly** *adv.*

tri·graph (trī′graf, -gräf) *n.* A group of three letters representing one articulate sound: *eau* in *beau*; also, the sound thus represented. [<TRI- + -GRAPH] — **tri·graph′ic** *adj.*

tri·he·dron (trī·hē′drən) *n.* *pl.* **·dra** (-drə) *Geom.* A figure having three plane surfaces meeting at a point. [<NL <Gk. *tri-* three + *hedra* a base] — **tri·he′dral** *adj.*

tri·hy·brid (trī·hī′brid) *n. Biol.* A hybrid whose parents differ from each other in respect to three pairs of contrasting Mendelian characters.

tri·hy·dric (trī·hī′drik) *adj. Chem.* Pertaining to or designating a compound containing three hydroxyl groups. Also **tri·hy·drox·y** (trī′hī·drok′sē). [<TRI- + HYDR(OXYL) + -IC]

tri·ju·gate (trī′jōō·gāt, trī·jōō′gāt, -git) *adj. Bot.* Having three pairs of leaflets. Also **tri·ju·gous** (trī′jōō·gəs, trī·jōō′gəs). [<L *trijugus* threefold < *tri-* three + *jugum* a yoke]

tri·lat·er·al (trī·lat′ər·əl) *adj.* Having three sides. [<L *trilaterus* < *tri-* three + *latus, lateris* a side] — **tri·lat′er·al·ly** *adv.*

tril·by (tril′bē) *n.* A soft felt hat with indented crown: informal wear for men in Great Britain. [after *Trilby,* a novel (1894) by George Du Maurier, in which such hats are described]

tri·lin·e·ar (trī·lin′ē·ər) *adj.* Pertaining to, referring to, or bounded by three lines.

tri·lin·gual (trī·ling′gwəl) *adj.* Derived from, composed of, or using three languages: a *trilingual* discourse. Also **tri·lin′guar.** [<L *trilinguis* < *tri-* three + *lingua* a tongue]

tri·lit·er·al (trī·lit′ər·əl) *adj.* Consisting of three letters. — **tri·lit′er·al·ism** *n.*

trill[1] (tril) *v.t.* **1** To sing or play in a quavering or tremulous tone. **2** *Phonet.* To articulate with a trill. — *v.i.* **3** To utter, make, or give forth a quavering or tremulous sound. **4** *Music* To execute a trill or shake. — *n.* **1** A tremulous utterance of successive tones, as of certain insects or birds; a warble. **2** *Music* A quick alternation of two notes either a tone or a semitone apart; shake. **3** *Phonet.* A rapid vibration of a speech organ, as of the tip of the tongue against the alveolar ridge or the uvula against the back of the tongue, as in the articulation of *rr* in Spanish. **4** A consonant or word so uttered. Also spelled *thrill.* [<Ital. *trillare,* prob. <Gmc.]

trill[2] (tril) *v.t.* & *v.i. Archaic* **1** To flow or cause to flow in a trickle, as tears. **2** To turn or roll; also, to quiver. [ME *trillen* <Scand. Cf. Sw. & Norw. *trilla* roll.]

tril·ling (tril′ing) *n.* A compound crystal made up of three individuals. [Cf. Dan. *trilling* a triplet]

tril·lion (tril′yən) *n.* A cardinal number; in the French and United States system of numeration, 1 followed by 12 zeros; in the English and German system, 1 followed by 18 zeros. — *adj.* Numbering a trillion. [<MF < *tri-* three + *million* million] — **tril′lionth** *adj.* & *n.*

tril·li·um (tril′ē·əm) *n.* Any of a genus (*Trillium*) of North American herbs of the lily family, with a stout stem, rising from a short rootstock and bearing a whorl of three leaves and a solitary flower. The fruit is a red or purple berry. [<NL <L *tri-* three; so called because of its three leaves]

tri·lo·bate (trī·lō′bāt, trī′lə·bāt) *adj.* **1** Three-lobed. **2** *Bot.* Having three lobes, as some leaves. Also **tri·lo′bal, tri·lo′bat·ed, tri′lobed.**

tri·lo·bite (trī′lə·bīt) *n. Paleontol.* Any of a subclass or group (*Trilobita*) of early Paleozoic marine arthropods related to the crustaceans, having a flattened body divided into a variable number of segments covered by a hard dorsal shield marked in three lobes. [<NL *Trilobites* <Gk. *tri-* three + *lobos* a lobe] — **tri′lo·bit′ic** (-bit′ik) *adj.*

tri·loc·u·lar (trī·lok′yə·lər) *adj.* Having three cells or chambers. [<TRI- + L *loculus* a small receptacle, dim. of *locus* a place]

tril·o·gy (tril′ə·jē) *n.* *pl.* **·gies** A group of three literary or dramatic compositions, each complete in itself, but continuing the same general subject. [<Gk. *trilogia* < *tri-* three + *logos* a discourse]

trim (trim) *v.* **trimmed, trim·ming** *v.t.* **1** To put in or restore to order; make neat by clipping, pruning, etc. **2** To remove by cutting: usually with *off* or *away.* **3** To put ornaments on; decorate. **4** In carpentry, to smooth; dress. **5** *Colloq.* **a** To chide; rebuke. **b** To punish or thrash; beat. **c** To defeat. **d** To cheat; victimize. **6** *Naut.* **a** To adjust (sails or yards) for sailing. **b** To cause (a ship) to sit well in the water by adjusting cargo, ballast, etc. **7** *Aeron.* To bring (an airplane) to level or balanced flight by adjusting control surfaces. **8** *Obs.* To furnish; equip. — *v.i.* **9** *Naut.* **a** To be or remain in equilibrium: said of a ship. **b** To adjust sails or yards for sailing. **10** To act so as to appear to favor opposing sides in a controversy. — *n.* **1** State of adjustment or preparation; fitting condition; orderly disposition: All was in good *trim.* **2** Condition as to general appearance; dress; style. **3** *Naut.* Fitness for sailing: said of a vessel in reference to disposition of ballast, masts, cargo, etc. **4** *Naut.* Actual or comparative degree of immersion: said of a vessel. **5** Particular character or nature; kind; stripe. **6** The moldings, etc., as about the doors of a building; also, the hardware trimmings of a house, such as hinges, window fastenings, etc. **7** Ornament; trapping; dress. **8** Material rejected or cut out, as sections from a motion-picture film. **9** In advertising, window dressing or display. **10** The interior furnishings of an automobile body. **11** *Aeron.* The position of an aircraft relative to balanced flight. — *adj.* **trim·mer, trim·mest** **1** Adjusted to a nicety; being in perfect order; handsomely equipped or of stylish and smart appearance; spruce; precise; jaunty. **2** Excellently fit; nice; pretty; fine. See synonyms under NEAT[1], STAUNCH. — *adv.* In a trim manner: also **trim′ly.** [OE *trymman* arrange, strengthen < *trum* steadfast, strong] — **trim′ness** *n.*

tri·mer (trī′mər) *n. Chem.* A compound formed by the union of three molecules of another compound or substance, as benzene from acetylene. [<TRI- + Gk. *meros* a part]

trim·er·ous (trim′ər·əs) *adj.* **1** Composed of three similar parts. **2** *Bot.* Three-parted. **3** *Entomol.* Having three joints, as the tarsus of an insect: often written 3-*merous.* [<TRI- + Gk. *meros* a part]

tri·mes·ter (trī·mes′tər) *n.* A three-month period; quarter. [<F *trimestre* <L *trimestris* < *tri-* three + *mensis* a month] — **tri·mes′·tral, tri·mes′tri·al** *adj.*

trim·e·ter (trim′ə·tər) *adj.* In prosody, consisting of three measures or of lines containing three measures. — *n.* **1** A verse consisting of three measures, as the iambic trimeter. **2** In classical prosody, a line or verse consisting of three dimeters, or six feet. [<L *trimetrus* <Gk. *trimetros* < *tri-* three + *metron* a measure]

tri·meth·yl·pen·tane (trī′meth·il·pen′tān) *n. Chem.* One of five isomers of the pentane series, C_8H_{18}, used as a solvent and high-compression motor fuel. Also called *isooctane.* Compare OCTANE NUMBER. [<TRI- + METHYL + PENTANE]

tri·met·ric (trī·met′rik) *adj.* **1** Trimeter. **2** Orthorhombic. Also **tri·met′ri·cal.**

trimetric projection *Geom.* A three-dimensional geometric projection in which each dimension is measured on a separate scale and according to arbitrarily assigned angles.

tri·met·ro·gon (trī·met′rə·gon) *n.* A high-speed system of aerial topographic photography, in which a unit of three cameras takes simultaneous pictures of one area, from three positions, one vertical and two at matching oblique angles. — *adj.* Of or pertaining to this system or camera unit. [<TRI- + METRO- + -GON]

trim·mer (trim′ər) *n.* **1** One who or that which trims. **2** A time-server. **3** *Brit.* One who keeps the balance between opposing political parties by throwing his support from one to the other. **4** A small horizontal beam, as in a floor, into which the ends of one or more joists are framed. **5** A tool or machine with which to trim; specifically, a large table with power saw used to trim lumber for buildings.

tri·mo·lec·u·lar (trī′mə·lek′yə·lər) *adj. Chem.* Having, consisting of, or pertaining to three molecules.

tri·month·ly (trī·munth′lē) *adj.* & *adv.* Done or occurring every third month.

tri·morph (trī′môrf) *n.* **1** A substance existing or occurring in three forms. **2** One of the forms in which such a substance exists. [<Gk. *trimorphos* having three forms < *tri-* three + *morphē* a form]

tri·mor·phism (trī·môr′fiz·əm) *n.* **1** *Bot.* The existence on the same plant of three distinct forms of flowers as regards the relative lengths of stamens and pistils. **2** *Mineral.* The property of crystallizing in three series of fundamentally different forms with the same ultimate chemical composition. **3** *Zool.* Difference of species in form, color, etc., characterizing three distinct types. — **tri·mor′phic, tri·mor′phous** *adj.*

Tri·mur·ti (trī·mōōr′tē) *n.* In Hindu mythology, the triad of the Vedas, consisting of Brahma (the Creator), Vishnu (the Preserver), and Siva (the Destroyer). [<Skt. *trimūrti* < *tri-* three + *mūrti* shape]

Tri·na·cri·a (trī·nā′krē·ə, trī-) Ancient name for SICILY. — **Tri·na′cri·an** *adj.*

tri·nal (trī′nəl) *adj.* **1** Of or pertaining to three. **2** Having three parts; threefold. [<LL *trinalis* <L *trinus* three each < *tres, tria* three]

tri·na·ry (trī′nər·ē) *adj.* Made up of three parts or proceeding by threes; ternary. [<LL *trinarius* of three kinds <L *trinus.* See TRINAL.]

Trin·co·ma·lee (tring′kō·mə·lē′) **1** A port of NE Ceylon, capital of its eastern province and of Trincomalee district. **2** A district of NE Ceylon; 1,165 square miles.

trin·dle (trin′dəl) *n.* **1** One of several forked pieces of wood or metal between the cords and boards of a book to flatten its front and back edges before cutting. **2** *Brit. Dial.* A wheel, especially of a barrow. **3** A large wooden tub. — *v.t.* **1** *Brit. Dial.* To trundle; roll. — *v.i. Brit. Dial.* **2** To travel easily and rapidly. **3** To roll; advance by rolling. Also **trin′tle** (-təl). [ME *trindel,* var. of OE *trendel* a circle]

trine[1] (trīn) *adj.* **1** Threefold; triple: also *trinal.* **2** In astrology, relating to or situated in trine; auspicious. — *n.* **1** A compound in three parts or elements; a trio; triad. **2** *Her.* A charge composed of three objects. **3** In astrology, the aspect of two planets when 120° apart. — *v.t. Obs.* In astrology, to place or join in trine. [<OF *trin, trine* <L *trinus.* See TRINAL.]

trine[2] (trīn) *v.i. Obs.* To proceed; go. [< Scand. Cf. OSw. *trina* tramp.]

Trine (trīn) *n.* The Trinity.

Trin·i·dad and To·ba·go (trin′ə·dad, tō·bā′gō, *Span.* trē′nē·thäth′) An independent member of the Commonwealth of Nations, in the West Indies NE of Venezuela, comprising the islands of **Trinidad;** 1,864 square miles; and **Tobago;** 116 square miles; capital, Port-of-Spain, on Trinidad.

Tri·nil mas (trī′nil) *Paleontol.* Pithecanthropus. [from *Trinil,* Java, where remains were found]

Trin·i·tar·i·an (trin′ə·târ′ē·ən) *adj.* **1** Of or pertaining to the Trinity. **2** Holding or professing belief in the Trinity: distinguished from *Unitarian.* — *n.* A believer in the doctrine of the Trinity. [<NL *trinitarius* <LL *trinitas* TRINITY] — **Trin′i·tar′i·an·ism** *n.*

tri·ni·trate (trī·nī′trāt) *n. Chem.* A nitrate containing three nitric-acid radicals in combination: bismuth *trinitrate.*

tri·ni·tro·ben·zene (trī·nī′trō·ben′zēn) *n. Chem.* A yellow crystalline compound, $C_6H_3(NO_2)_3$,

occurring in three forms, one of which is highly explosive.
tri·ni·tro·cre·sol (trī·nī′trō·krē′sōl, -sol) *n. Chem.* A yellow crystalline organic compound, $C_8H_8N_3O_7$, used as an explosive. [<TRI- + NITRO- + CRESOL]
tri·ni·tro·phe·nol (trī·nī′trō·fē′nōl, -nol) *n.* Picric acid. [<TRI- + NITROPHENOL]
tri·ni·tro·tol·u·ene (trī·nī′trō·tol′yōō·ēn) *n. Chem.* A high explosive, $C_7H_5N_3O_6$, made by treating toluene with nitric acid: used for filling high explosive shells, for it melts readily and can be poured safely and rapidly: also called *TNT, trotyl.* Also **tri·ni′tro·tol′u·ol** (-yōō·ōl, -ol). [<TRI- + NITRO- + TOLUENE]
trin·i·ty (trin′ə·tē) *n. pl.* **·ties** **1** In art, a symbolic representation of the Trinity. **2** The state or character of being three; also, any union of three parts or elements in one; a trio; triad. [<OF *trinite* <LL *trinitas* <L, a triad < *trinus.* See TRINAL.]
Trin·i·ty (trin′ə·tē) *n.* **1** *Theol.* A threefold personality existing in the one divine being or substance; the union in one God of Father, Son, and Holy Spirit as three infinite persons. **2** Trinity Sunday.
Trinity, Cape A cliff on the lower Saguenay River, SE central Quebec, Canada; 1,500 feet high.
Trinity River A river in Texas, flowing 510 miles SE to **Trinity Bay**, the NE arm of Galveston Bay.
Trinity Sunday *Eccl.* The eighth Sunday after Easter, observed as a festival in honor of the Trinity. Also *Trinity.*
trin·ket (tring′kit) *n.* **1** Any small ornament, as of jewelry. **2** Any small article forming part of an outfit. **3** A trifle; a trivial object; a toy. **4** *Obs.* A knife. See synonyms under GAUD. [<AF *trenquet,* OF *trenchet* a toy knife, ornament, < *trenchier.* See TRENCH.]
trin·kums (tring′kəmz) *n. pl. Scot. & Brit. Dial.* Small ornaments; trinkets. Also **trin′·kum–tran′kums** (-trang′kəmz). [Appar. alter. of TRINKET]
tri·no·dal (trī·nōd′l) *adj. Bot.* Having three nodes or nodal points.
tri·no·mi·al (trī·nō′mē·əl) *adj.* **1** *Biol.* Of, having, or employing three terms or names—the generic, the specific, and the subspecific or varietal, as *Lynx rufus texensis,* the Texas bobcat. **2** *Math.* Consisting of three terms connected by plus or minus signs or both. —*n.* **1** An algebraic expression consisting of three terms connected by plus or minus signs or both, as $3x + y - 27z$. **2** A trinomial name. Also **tri·nom′i·nal** (-nom′ə·nəl), **tri·on′·y·mal** (-on′ə·məl). [<TRI- + (BI)NOMIAL]
tri·o (trē′ō, *for def. 1 also* trī′ō) *n. pl.* **tri·os** **1** Any three things grouped or associated together. **2** *Music* **a** A composition for three performers. **b** The second part of a minuet or scherzo, of a march, and of dance forms generally. **c** A group of three musicians who render trios. [<F <Ital. < *tre* three <L *tres, tria*]

un-[1] *prefix* Not; opposed to. [OE] ◆ **Un-**[1] is used to express negation, lack, incompleteness or opposition. It is freely attached to adjectives and adverbs, less often to nouns. See UN-[2].

un-[2] *prefix* Back. [OE *un-, on-, and-*] ◆ **Un-**[2] is used to express reversal of the action of verbs, or to form verbs from nouns indicating removal from the state or quality expressed by the noun, or sometimes to intensify the force of negative verbs. Beginning at the foot of this page will be found a partial list of words which are formed with **un-**[1] and **un-**[2]. Other compounds of these prefixes, with strongly positive, specific, or special meanings, will be found in vocabulary place. In the verbs in the list *un-* gives the sense of reversal: *unchain* "to loose the chains of." In the nouns and the adjectives usually it has negative or privative force. Thus, *unburdened* may be regarded as an adjective meaning "not burdened," or as a participle of the verb *unburden,* meaning "relieved of a burden." *In-* as a prefix of adjectives expresses in usage more of negation, *un-* more of mere lack or privation: a child's *unartistic* speech, a writer's *inartistic* diction. In general, *in-* is more confined to words of Latin origin.

Pronunciations may be ascertained by consulting the second element in its vocabulary place.

use·ful (yōōs′fəl) *adj.* Serviceable; serving a use or purpose, especially a valuable one; productive of good; beneficial. — **use′ful·ly** *adv.* — **use′ful·ness** *n.*

Synonyms: adapted, advantageous, available, beneficial, conducive, convenient, favorable, good, helpful, profitable, salutary, serviceable, suitable, suited. See CONVENIENT, EXPEDIENT, GOOD. Compare UTILITY. *Antonyms*: see synonyms for USELESS.

use·less (yōōs′lis) *adj.* Unserviceable; being of no use; not serving, or not capable of serving, any beneficial purpose. — **use′less·ly** *adv.* — **use′less·ness** *n.*

Synonyms: abortive, bootless, fruitless, futile, ineffectual, nugatory, null, profitless, unavailing, unprofitable, unserviceable, vain, valueless, worthless. That which is *bootless, fruitless,* or *profitless* fails to accomplish any valuable result; that which is *abortive, ineffectual,* or *unavailing* fails to accomplish a result that it was, or was supposed to be, adapted to accomplish. That which is *useless, futile,* or *vain* is inherently incapable of accomplishing a specified result. *Useless* in the widest sense signifies not of use for any valuable purpose, and is thus closely similar to *valueless* and *worthless. Fruitless* is more final than *ineffectual,* as applying to the sum or harvest of endeavor. That which is *useless* lacks fitness for a purpose; that which is *vain* lacks imaginable fitness. See VAIN, WASTE. *Antonyms*: see synonyms for USEFUL.

ve·nal[1] (vē′nəl) *adj.* **1** Ready to sell honor or principle, or to accept a bribe; mercenary; purchasable: said of persons. **2** Subject to sordid bargaining or to corrupt influences; salable. **3** Characterized by corruption and venality. [<L *venalis* < *venum* sale] — **ve′nal·ly** *adv.*

Synonyms: hireling, mercenary, purchasable, salable. *Mercenary* has especial application to character or disposition; as, a *mercenary* spirit; *mercenary* motives—that is, a spirit or motives to which money is the chief consideration or the moving principle. Thus, etymologically, the *mercenary* can be hired, while the *venal* are openly or actually for sale; *hireling* signifies serving for hire or pay, or having the spirit or character of one who works or of that which is done directly for hire or pay. The *hireling*, the *mercenary*, and the *venal* are alike in making principle, conscience, and honor of less account than gold or sordid considerations; but the *mercenary* and *venal* may be simply open to the bargain and sale which the *hireling* has already consummated. A public officer who makes his office tributary to private speculation is *mercenary*; if he receives a stipulated recompense for administering his office at the behest of some leader, faction, corporation, or the like, he is both *hireling* and *venal*; if he sells essential advantages, without subjecting himself to any direct domination, his course is *venal*, but not *hireling*. *Antonyms*: disinterested, honest, honorable, incorruptible, patriotic, unpurchasable.

ve·nal[2] (vē′nəl) *adj.* Of or pertaining to the veins; venous. [<L *vena* vein]
ve·nal·i·ty (vē·nal′ə·tē) *n. pl.* **·ties** The state or character of being basely or improperly influenced by sordid considerations; prostitution, as of talents, office, etc., for gain or reward; willingness to accept bribes. [<L *venalitas, -tatis*]

ven·er·a·ble (ven′ər·ə·bəl) *adj.* **1** Meriting or commanding veneration; worthy of reverence: now usually implying age. **2** Exciting reverential feelings because of sacred or elevated associations. **3** Revered: used as a title for an archdeacon in Anglican churches, and for those beatified in the Roman Catholic Church. See synonyms under ANCIENT[1]. [<OF <L *venerabilis* < *venerari* revere] — **ven′er·a·ble·ness, ven′er·a·bil′i·ty** *n.* — **ven′er·a·bly** *adv.*
ven·er·ate (ven′ə·rāt) *v.t.* **·at·ed, ·at·ing** To look upon or regard with respect and deference; revere. [<L *veneratus*, pp. of *venerari* revere]

Synonyms: adore, honor, respect, revere, reverence. In the highest sense, to *revere* or *reverence* is to hold in mingled love and honor with something of sacred fear; to *revere* is a wholly spiritual act; to *reverence* is often, but not necessarily, to give outward expression to the reverential feeling; we *revere* or *reverence* the divine majesty. *Revere* is a stronger word than *reverence* or *venerate*. To *venerate* is to hold in exalted honor without fear, and is applied to objects less removed from ourselves than those we *revere*, being said especially of aged persons, of places or objects having sacred associations, and of abstractions; we *venerate* an aged friend or some great cause, as that of civil or religious liberty; we do not *venerate* God, but *revere* or *reverence* him. We *adore* with a humble yet free outflowing of soul. See ADMIRE, DEFER. *Antonyms*: contemn, despise, disdain, dishonor, disregard, scorn, slight, spurn.

ven·er·a·tion (ven′ə·rā′shən) *n.* **1** The act of venerating; reverence; profound respect combined with awe, evoked by the high character or wisdom of a person. **2** The act of worshiping; worship.

Synonyms: adoration, awe, dread, reverence. *Awe* is inspired by that in which there is sublimity or majesty so overwhelming as to awaken a feeling akin to fear; in *awe*, considered by itself, there is no element of esteem or affection, but a sense of the vastness, power, or grandeur of the object. *Dread* is a shrinking apprehension or expectation of possible harm awakened by any one of many objects or causes; in its higher uses *dread* approaches the meaning of *awe*, but with more of chilliness and cowering, and without that subjection of soul to the grandeur and worthiness of the object that is involved in *awe*. *Reverence* and *veneration* are less overwhelming than *awe* or *dread*, and suggest something of esteem, affection, and personal nearness. We may feel *awe* of that which we cannot reverence, as a grandly terrible ocean storm; *awe* of the divine presence is more distant and less trustful than *reverence*. *Veneration* is commonly applied to things which are not subjects of *awe*. *Adoration*, in its full sense, is loftier than *veneration*, less restrained and awed than *reverence*, and with more of the spirit of direct, active, and joyful worship. See REVERENCE. Compare VENERATE. *Antonyms*: contempt, disdain, dishonor, disregard, scorn.

ve·ne·re·al (və·nir′ē·əl) *adj.* **1** Pertaining to or proceeding from sexual intercourse. **2** Communicated by sexual relations with an infected person: a *venereal* disease. **3** Pertaining to or curative of diseases so communicated. **4** Infected with venereal disease. Gram.* A noun directly derived from a verb, in English often having the form of the present participle, and signifying the act or process of what is expressed in the verb root; as, there shall be *weeping* and *wailing* and *gnashing* of teeth; also, an infinitive used as a noun; as, *to err* is human: also **verbal noun.** Compare GERUND. [<F <LL *verbalis* <L *verbum* word] — **ver′bal·ly** *adv.*

Synonyms (adj.): literal, oral, vocal. These words, whose etymology would make them similar in meaning, are differentiated in usage by their applications. *Oral* (L *os* the mouth) signifies uttered through the mouth or (in common phrase) by word of mouth; *vocal* (L *vox* the voice) signifies of or pertaining to the voice, uttered or modulated by the voice, and especially uttered with or sounding with full, resonant voice; *literal* (L *litera* a letter) signifies consisting of or expressed by letters, or according to the letter in the broader sense of the exact meaning or requirement of the words used; what is called "the letter of the law" is its *literal* meaning without going behind what is expressed by the letters on the page. Thus *oral* applies to that which is given by spoken words in distinction from that which is written or printed; as, *oral* tradition; an *oral* examination. By this rule we should in strictness speak of an *oral* contract or an *oral* message, but *verbal* contract and *verbal* message, as indicating that which is spoken rather than by written word, have become fixed in the language. A *verbal* translation may be *oral* or written, so that it is word for word; a *literal* translation follows the construction and idiom of the original as well as the words; thus a *literal* translation is more than one that is merely *verbal*; both *verbal* and *literal* are opposed to *free.* In the same sense, of attending to words only, we speak of *verbal* criticism, a *verbal* change. *Vocal* has primary reference to the human voice; as, *vocal* sounds, *vocal* music; *vocal* may be applied within certain limits to inarticulate sounds given forth by other animals than man; as, The woods were *vocal* with the songs of birds; *oral* is never so applied.

Verner's Law A law regarding certain consonant changes in Germanic languages, set forth by Karl Verner in 1876, stating that certain exceptions to Grimm's Law are due to a still wider law, namely, the position of the primary accent in the parent language. It shows that original Indo-European voiceless plosives *p, t, k,* which, according to Grimm's Law became in Germanic the voiceless fricatives *f, th* (as in *thin*), *h,* became, instead, except in specific combinations, the corresponding voiced fricatives and, ultimately, the voiced plosives, *b, d, g,* if the original Indo-European tonic stress was not on the immediately preceding syllable. This statement can be illustrated in English by the distinction in final consonant between *death* and *dead.* The same process operated for the Indo-European *s,* which became *z,* and finally *r,* as can be seen in English *was* and *were, raise* and *rear.*

[Fusion of OE *wacan* awake and *wacian* be awake. Akin to WATCH.]
• **awake, awaken, wake, waken** These four verbs, so similar in basic meaning, offer a confusing variety of choices in actual use. In the imperative, *Wake up!* is the familiar and homely form; the other three would be felt as poetic. *Awake* and *wake* have checkered form-histories. In the King James Bible, Shakespeare, and Milton, only the inflected forms in *-ed* are found. But *awake* and *wake* each had a strong verb as well as a weak one in its ancestry, and in the late seventeenth century the alternative inflected forms *awoke, awoken,* and *woke, woken* emerged, reinforced by analogy with *break, broke, broken,* etc. These alternative forms have led to uncertainty and confusion in usage. For the past tense of *awake, awoke* is usual; *awaked* tends to be felt as Biblical. *Awoke* as the past participle is rare, and *awaked* seems awkward to some; what happens in practice is a borrowing of the past participle from *awaken.* For *wake,* the more usual past is *woke* (or *woke up*); *waked* in the intransitive is also standard, but in the transitive sense it is dialectal, referring to holding a vigil or wake: They *waked* old Tim on Thursday night. Real uncertainty arises over the form to choose for the past participle of *wake.* In British (or dialectal American) usage, *woken,* or, for the phrasal verb, *woken up* is used: He had *woken* (or *woken up*) early. American usage here employs *waked (up),* or if this is felt as awkward, particularly in the passive, the past participle is borrowed from *waken* or *awaken*: What *woke* her? She was *awakened* (or *wakened*) by the noise of the crash.

who (hōō) *pron. possessive case* **whose;** *objective case* **whom** 1 As an interrogative, which or what person or persons. 2 As a relative, that: pointing out or fixing upon a particular person or persons, and identifying the subject or object in a relative clause with that of the principal clause. 3 As a compound relative, he, she, or they that: *Who* steals my purse steals trash. — **as who should say** As one who should say; as if one should say. [OE *hwa, hwā*]

◆ In modern usage, *who* as a relative is applied only to persons, *which* only to animals or to inanimate objects, *that* to persons or things indifferently. *Whose* is correctly used as the possessive of *which,* as well as of *who,* especially where the phrase *of which* would seem awkward: the man *whose* house was sold; a peak *whose* (*of which* the) summit seeks the sky. The use of *whom* as an interrogative pronoun in initial position, as in *Whom* did you see?, is supported by some grammarians, but the more natural *Who* did you see? *Who* did you give the book to? are in wider use and are now considered acceptable. However, when used after a verb or preposition, *whom* is still required, as in To *whom* did you give it? You saw *whom*? See also usage note under THAT (pronoun).

Synonyms: attainment, depth, discernment, discretion, enlightenment, erudition, foresight, information, insight, judgment, judiciousness, knowledge, learning, lore, prescience, profoundity, prudence, reason, reasonableness, sagacity, sense, skill, understanding. *Enlightenment, erudition, information, knowledge, learning,* and *skill* are acquired, as by study or practice. *Insight, judgment, profundity* or *depth, reason, sagacity, sense,* and *understanding* are native qualities of mind, but are capable of increase by cultivation. *Wisdom* is mental power acting upon the materials that fullest *knowledge* gives in the most effective way. There may be what is termed "practical *wisdom*" that looks only to material results; but in its full sense *wisdom* implies the highest exercise of all the faculties. *Prudence* is a more negative form of the same virtue and largely with a view of avoiding loss and injury. *Judgment*, the power of forming decisions, is broader and more positive than *prudence*, leading one to do, as readily as to refrain from doing; but *judgment* is more limited in range and less exalted in character than *wisdom*. *Skill* is far inferior to *wisdom*, consisting largely in the practical application of acquired *knowledge*, power, and habitual processes, or in the ingenious contrivance that makes such application possible. In the making of something perfectly useless there may be great *skill*, but no *wisdom*. Compare KNOWLEDGE, PRUDENCE. *Antonyms*: absurdity, error, fatuity, folly, foolishness, idiocy, imbecility, imprudence, indiscretion, miscalculation, misjudgment, nonsense, shallowness, silliness, stupidity.

would (wŏŏd) Past tense of WILL, expressing desire, condition, or what might be expected: used also to express determination: He *would* go, I couldn't stop him. [OE *wolde,* pt. of *willan* will]
● **would & should** Anybody dealing in ifs, as-ifs, promises, threats, hopes, wishes, or similar feelings and attitudes about the real or imagined future, will find himself making plentiful use of *would* and/or *should,* which do duty to express the vestigial and fast vanishing subjunctive mood. As to which one to use, the distinctions are subtle and fine-drawn and at several points British usage calls for *should* where American practice is

to use *would*, although *would* has not here displaced *should* to the extent that *shall* has given way to *will* (see usage note under SHALL vs. WILL). (1) In simple factual conditions, for example, British usage calls for *should* in the first person in the conclusion: If he failed, I *should* (U.S. *would*) still support him. (2) When one of these modal auxiliaries is to be used in the first person preceding such verbs as *like, prefer, care, be glad*, etc., British usage holds firmly to *should*; but American, Scottish, and Irish usage calls for *would*: We *would* (Brit. & formal U.S. *should*) like to have you come to dinner next Tuesday. *Would* in this example represents true present time. (3) *Would* is the true past expressing an act of will mostly in negations or expressions of indifference: They asked him to wait, but he *would* not (was unwilling to comply). (4) *Would* can also convey customary or habitual action in the past: He *would* take her gifts every time he called. Except for these rare instances in which *would* is used as a true past, it is usually confined to the purposes of the subjunctive. (5) It may express an act of will under projected or imagined conditions: (I, You, He) *wouldn't* tolerate that insult even if it were offered with smiling politeness. (6) When no condition is expressed, *would* in the second and third person often lacks even a vestigial trace of any act of will: She *would* be no more than second choice in the matrimonial sweepstakes. (7) When *would* is stressed with the voice it may indicate (a) an element of malign fate or misfortune: She *would* be the one to lose her take-home fare; or (b) the notion of persistent contrariness: You *would* insist on bumping your head against a stone wall twice! (8) In conditions contrary to fact, *would* is used in conclusion without any feeling of volition involved: Had he left sooner he *would* have heard less to his discredit. If I had been able to dodge the small souls around the commission, I *would* (Brit. *should*) have got a third share in the radio station. (9) *Would* may also express probability in cases where some contingency or hypothesis is unexpressed: "He was very boastful." "He *would* be." (10) Finally, there is the matter of the idiomatic use of *would* and *should* in indirect or reported discourse. In most cases, if the direct utterance used *shall*, the reported discourse employs *should*. Similarly, if it was *will* in the direct utterance, *would* is used in the indirect discourse. If obligation is involved, *should* must be used. Except in this area of obligation, *would* is the more common form in American usage.

Abbreviations

This list of abbreviations and meanings is a selection of those commonly in use in printed works. There are many forms of abbreviations—capital letters or lower-case letters, periods or no periods, spaces between letters or no spaces, and so on. In this list abbreviations are given without periods. Most are given without spaces and the majority are in lower-case letters unless usage dictates otherwise.

Most of the words that the abbreviations represent are spelled here in lower-case letters, although they may appear elsewhere with initial capital letters. Abbreviations such as *mt* for *mount* usually begin with a capital letter when used with proper nouns—as in *Mt Shasta*.

In abbreviations of foreign words or phrases, such as those from French or Latin, the English meaning always appears first, followed by the word or phrase in the language of origin.

Gazetteer

This section lists all of the more important political divisions and geographical features of the world, and all the urban localities in the United States and Canada having a population of 15,000 or more. The population figures given for places in the United States are from the census of 1980; those for Canada are from the census of 1976. All other population figures are from the latest available official censuses or official estimates, usually 1990. Maps of virtually all countries and of other important geographical features may be found in the main section of this dictionary at the appropriate alphabetic place of entry.

Postal ZIP codes are included for places in the United States. These were not, however, available in all cases. The asterisk (*) following some ZIP codes indicates that the city is further divided into postal zones and that the number given does not adequately identify a post office. In such cases further information is available from local postal authorities.

In the table below the authorized post office abbreviations of U.S. states are listed.

Grammar and Usage Handbook

Word Usage and Word Relationships

Agreement of Subject and Verb

It may seem needless to say that a singular subject takes a singular verb, while a plural subject takes a plural verb; however, when phrases or other elements come between the subject and the verb, the agreement may not be clear.

The small table around which the children play *was* in the hall.

The small tables owned by the church *were* in the hall.

The men, as well as the policeman, *were* aghast at the sight.

The following words are generally considered singular and take singular verbs: *each, either, neither, one, someone, anyone, everybody, nobody, somebody, much, anybody, everyone.*

The following words are plural and take plural verbs: *both, few, many, several.*

The following pronouns may be singular or plural depending on the meaning intended: *all, most, some, every, none, any, half, more.*

When one is referring to two or more persons who are of different sexes, or to a group of people whose gender one has no way of determining, the pronouns *they, them,* and *their* are often used to refer to *anyone, each, everybody,* etc., in order to avoid the awkward *he or she, him or her, his or her.*

Either—Or; Neither—Nor

Neither always takes *nor; either* takes *or.*

When a subject is compounded with *neither . . . nor* or *either . . . or,* the verb is normally singular if the nouns joined are singular, and plural if they are plural. If, however, one noun is singular and one plural, the verb agrees with the second or nearer subject.

Either Bill or Ralph *is* lying.

Neither she nor her sisters *skate* well.

Collective Nouns

A collective noun, such as *class, company, club, crew, jury, committee,* takes a singular verb when the whole is considered as a unit, and a plural verb when members of the whole are being considered separately.

The jury *has* deliberated for six hours.

The crew *were* near exhaustion after their many hours of exposure.

Some collective nouns, as *police* and *cattle,* are used only in the plural form; others, as *mankind* and *wildlife,* are generally used in the singular form.

The cattle *were* almost destroyed by the severe storm.

The New England wildlife *has* been protected.

Agreement of Pronoun with Its Antecedent

If the antecedent is singular, the pronoun is singular, if the antecedent is plural, the pronoun is likewise plural.

The *boy* did *his* best in the contest.

The *boys* in the school did *their* best.

The *boy and* the *girl* did *their* best.

Neither one of the boys did *his* best.

Capitalization

Conventions governing the use of capital letters are quite clear.

Capitalize the first word of every sentence.

The first person singular pronoun *I* and the vocative *O* are generally capitalized.

Unless style requires a different form, *a.m.* and *p.m.* are set in small letters without a space between them. Capital letters are used for B.C. and A.D. but, again, there is no space between them.

9:30 a.m. 10:30 p.m.

A.D. 1760 *or* 1760 A.D.

76 B.C.

Note: Although A.D. should technically precede the number of the year, popular usage permits it to follow the date. In printed matter B.C., A.D., a.m., and p.m. usually appear in small capitals (B.C., A.D., A.M., P.M.).

The first letter of a line of conventional poetry is capitalized. Much modern poetry, however, ignores this convention.

Hickory, dickory, dock
The mouse ran up the clock.

The first word after a colon should be capitalized only when it begins a complete sentence.

The candidate made only one promise: If elected, he would fight for better conditions.

The list contained these items: five pounds of flour, two dozen eggs, and a pound of butter.

Every direct quotation should begin with a capital,

except where the quoted passage is grammatically woven into the text preceding it.

The announcer shouted, "There it goes, over the back wall for a home run!"

The announcer shouted that the ball was going "over the back wall for a home run."

Capitalize the first letters of all important words in the titles of books, newspapers, magazines, chapters, poems, articles. Short conjunctions and prepositions are generally not capitalized.

How to Win Friends and Influence People

Geographical divisions and regions require capitals.

Arctic Circle	the Atlantic Seaboard
the Orient	the Great Plains

Compass points are capitalized when they are part of a generally accepted name, but not when they denote direction or locality.

Middle East	eastern New York
Old South	Head west for twenty-five miles.

Capitalize names of streets, parks, buildings, but not the general categories into which they fall.

Fifth Avenue

Which avenue is widest?

General Post Office

We went to the post office.

Religions, religious leaders, the various appellations for God and the Christian Trinity require capitalization, as do all names for the Bible and its parts.

the Father, the Son, and the Holy Ghost

Virgin Mary, the Immaculate Virgin

Yahweh, Jehovah, Saviour, Messiah

Buddhism, Shintoism, Taoism

New Testament

Exodus

Sermon on the Mount

Ten Commandments

Capitalize the names of political parties, classes, clubs, organizations, movements, and their adherents. Use small letters for the terms that refer generally to ideology (bolshevism, fascism, socialism).

Democratic Party

the Right Wing

Farm bloc

Boy Scouts of America

Political Divisions are capitalized.

Holy Roman Empire	the Colonies
French Republic	Suffolk County
the Dominion	Eighth Election District

Government bodies, departments, bureaus, and courts are capitalized.

the Supreme Court	the Cabinet
House of Representatives	Census Bureau
Department of Labor	British Parliament

Capitalize the titles of all high-ranking government officials, and all appellations of the President of the United States. Many publishers, it should be pointed out, prefer small letters for titles that are not accompanied by the name of the official.

President	Commander-in-Chief
Secretary of State	Chief Justice
Undersecretary	Prime Minister
Ambassador to India	Minister of War

Capitalize the names of treaties, documents, and important events.

Second World War	Declaration of Independence
Treaty of Versailles	Boston Tea Party

Family designations, when used without a possessive pronoun, take a capital letter.

I sent Mother home by taxi.

I sent my mother home by taxi.

Capitalize seasons only when they are personified. All personifications require capitals.

The frosty breath of Winter settled on the land.

The voice of Envy whispered in her ear.

Necessity is the mother of Invention.

When Headquarters commands, we jump.

He saw Mother Nature's grim visage.

Names and epithets of peoples, races, and tribes are capitalized.

Caucasian	Sioux
Negro	Cliff Dwellers

Articles and prepositions are generally capitalized in the names of Englishmen and Americans, and are not capitalized in French, Italian, Spanish, German, and Dutch names, unless otherwise specified by family usage.

Thomas De Quincey	Ludwig van Beethoven
Martin Van Buren	Leonardo da Vinci
Fiorello La Guardia	San Juan de la Cruz

Capitalize the names of holidays and festivals.

Christmas	Shrove Tuesday
Yom Kippur	New Year's Day

Capitalize such parts of a book as Glossary, Contents, Index, and Preface.

Capitalize the first and last words in the salutation in business letters, and all titles.

My dear Sir	Dear Doctor Brown
My dear Reverend Lothrop	Dear Reverend Father

Capitalize only the first word of the complimentary close of a letter.

Very truly yours Sincerely yours

Spelling

General Suggestions

When in doubt as to the correct spelling of a word, consult the dictionary; do not take anything for granted.

Keep a list of your spelling errors and study them.

Learn the most commonly misspelled words in the lists below.

Learn to spell by syllables, carefully pronouncing each syllable. Faulty spelling is often due to faulty pronunciation.

Use newly acquired words and make them part of your oral and written vocabulary.

Do not use the simplified or modern forms of spelling in business correspondence, as *thru* for *through*.

Learn some basic spelling rules such as the following.

cede, ceed, and sede endings According to the Government Style Manual, there is only one word which ends in *sede—supersede,* and three that end in *ceed—proceed, exceed, succeed.* All other words having this sound end in *cede—precede, secede, recede,* etc.

ie and ei a. After *c,* when the sound is long *e* (ē), the *e* usually precedes the *i:* rec*ei*ve, dec*ei*ve, c*ei*ling, rec*ei*pt.

b. After most other letters, the *i* precedes the *e:* th*ie*f, gr*ie*f, bel*ie*ve, ach*ie*ve, l*ie*n.

c. When the sound is *not* long *e* (ē); and especially if the sound is long *a* (ā), the *e* precedes the *i:* sl*ei*gh, v*ei*l.

The exceptions must be learned, since they follow no rule: n*ei*ther, l*ei*sure, w*ei*rd, s*ei*ze.

Beginnings and Endings of Words (Prefixes and Suffixes)

a. As a general rule, drop the final *e* in the base word when a suffix beginning with a vowel is added.

decide—deciding; write—writing; type—typist

b. As a rule, retain the final *e* in the base word when a suffix beginning with a consonant is added.

remote—remotely; care—carefully; infringe—infringement

c. In applying the rule for adding *ed* or *ing,* the accent (or lack of it) may serve as a guide. Words of one syllable (and most words of more than one syllable) that end in a single consonant (except *f, h,* or *x*), preceded by a single vowel, double the final consonant *if the accent falls on the last syllable.*

plan—planned, planning; whet—whetted, whetting

transfer—transferred, transferring; control—controlled, controlling

When the word is *not* accented on the last syllable, the consonant is usually not doubled.

travel—traveled, traveler; profit—profited, profiteer

d. When the endings *ness* and *ly* are added to a word not ending in *y,* the base word rarely changes. In most words ending in *y,* the *y* changes to *i* when *ly* is added.

natural—naturally; similar—similarly; genuine—genuineness; blessed—blessedness; hazy—hazily; body—bodily

If the base word ends in *n* and the suffix *ness* is added, the *n* is doubled.

sudden—suddenness; mean—meanness; vain—vainness

e. In regard to the word endings *ise, ize, yze,* the most common form is *ize,* but here the dictionary should be consulted if there is doubt.

legalize, fraternize, criticize, jeopardize

advertise, merchandise, surmise, enterprise

paralyze, analyze

In British English *ise* is sometimes used for *ize,* as *realise* for *realize.*

f. When adding the suffix *ful,* the *l* is single except when *ly* is also added (*fully*).

care—careful—carefully; hope—hopeful—hopefully

g. When the word beginnings (prefixes) *in, en, im, em, un, dis, mis, be, de, re, il,* and *over* are added to a word, the spelling of the word is not changed.

inactive, enjoy, impending, embrace, uneasy, dismiss, mistrust, beguile, degrade, retreat, illegal, overhaul

Forming the Plurals of Nouns

a. Most nouns form the plural by simply adding *s.*

table—tables; house—houses

b. Some nouns, especially those ending in *s,* form the plural by adding *es.*

class—classes; fox—foxes

c. Words ending in *y* preceded by a consonant form the plural by changing the *y* to *i* and adding *es.*

candy—candies; study—studies; secretary—secretaries

d. Words ending in *y* preceded by a vowel form the plural by adding *s* but without any other change in the word.

key—keys; boy—boys

e. Nouns ending in *o* preceded by a vowel form the plural by adding *s.*

rodeo—rodeos; radio—radios

When the *o* is preceded by a consonant, the plural is formed by adding *es.*

hero—heroes; torpedo—torpedoes

f. Nouns referring to music which end in *o* preceded by a consonant form the plural by simply adding *s*.

piano—pianos; oratorio—oratorios; contralto—contraltos; soprano—sopranos

g. Some few nouns follow none of the above rules but form the plural in an unusual way.

child—children; tooth—teeth; mouse—mice; ox—oxen

h. Compound nouns (more than one word) form the plural from the main word.

trade union—trade unions; father-in-law—fathers-in-law

i. When a solid compound ends in *ful*, the plural is formed at the end of the solid compound and not within the word.

basketful—basketfuls; pocketful—pocketfuls

j. When the words in compounds are of almost equal importance, both parts of the compound are pluralized.

head of department—heads of departments; woman operator—women operators

k. Words taken from another language sometimes form the plural as they would in the original language.

stratum—strata; addendum—addenda; datum—data

Spelling Lists

List of Words Most Frequently Misspelled by High School Seniors

The list of words below* contains 149 words most frequently misspelled by high school seniors. These words and word-groups (those which are variants of the same word, as *acquaint* and *acquaintance*), were compiled by Dean Thomas Clark Pollock of New York University from 14,651 examples of misspelling submitted by 297 teachers in the United States, Canada and Hawaii. Each of the words represented was misspelled twenty times or more, and yet these words, comprising fewer than three per cent of the original list of 3,811 words, account for thirty per cent of the total misspellings.

NOTE: The trouble spots in each word are italicized. Numbers beside the words indicate how frequently each word is misspelled.

The Library Research Paper

by William W. Watt

What is research? In recent years the word has filtered out of the ivory tower and spread like an epidemic in the marketplace. Loose popular usage has worn the sharp edges from its meaning and threatened to deface its value. To many people *research* refers loosely to the act of looking up or checking up on anything, anywhere, in any way. Political polls, television ratings, the detection of factual errors in unpublished magazine articles, traffic counts at intersections, questionnaires on consumer habits, comparison shopping to price silk stockings—all are called *research*. The transitive verb ("I'll research it for you") appears to be catching up with the noun in popularity, and the well-drilled team is crowding out the lonely adventurer.

Though the weakening of a noble word may be disturbing, it is a useful reminder that the natural human passion for discovering, recording, and evaluating data is not—and never was—the special province of the academic expert in the library, laboratory, museum, geological quarry, or archaeological digging. The scholar's methods may be more systematic and his conclusions more profound. He may have a more sincere faith in the freedom that lies in the pursuit of truth for its own sake—in "pure" research. But he has no monopoly on the activity of research.

Of the infinite varieties, none is more generally useful than the experience that begins as a hunting expedition in a library and ends when the last period is typed on the finished paper. The library research paper is an inevitable academic assignment. Commonly known as the *term paper,* it regularly serves as a sort of commencement exercise at the end of the course or year. For the secondary school student who goes on to college, or for the college undergraduate who proceeds to graduate professional school, there is always another commencement, another beginning of a new research paper. But though the project may become increasingly ambitious and the process more complex, the essential discipline does not change with academic advancement. The basic rules remain the same. The student who forms scholarly habits of research in school will find them invaluable later, whether under the discipline of further formal education or the self-discipline of his vocation, his avocation, or a civic activity. Because the responsible adult is a student all his life, the word *student* will have no chronological limits in this article.

The experience of writing even a single research paper pays educational dividends to any serious student. It encourages him to develop a personal interest in a subject of his own choice. It offers an opportunity for genuine independent study. It introduces him to the resources of whatever library he is privileged to use. It shows him the excitement of tracking down knowledge that is not neatly packaged in a textbook or on a blackboard. It offers him the satisfaction of completing a task more thorough than any routine writing assignment. (The word *re-search* suggests thoroughness: a *searching again,* checking *and* double-checking.)

The task demands discriminating reading at various speeds and levels, accurate note-taking, intelligent summarizing, honest and systematic acknowledgement of intellectual indebtedness, and a more intricate organization than is ever required on a short composition. The process of separating truth from error and facts from judgments, of compiling and selecting evidence to support a credible conclusion, is a general application of *scientific* method; the problem of organizing the results on paper so that they will instruct and even intrigue a reader belongs to the province of *art*. In first-rate research the "two cultures" meet.

Ideally, then, the library research paper is the product of both critical thinking and creative writing. It should reflect the enthusiasm of an alert mind, not the methodological digging of a reluctant mole. But the most talented and enthusiastic student cannot even approach the ideal unless he is aware from the start that rigorous scholarly method (not pedantic methodology) is the foundation of success. To present an elementary understanding of that method is the purpose of this article.

Finding and Limiting a Subject

Unless the student has a specific assignment thrust upon him by a teacher, his first problem is to choose a subject for investigation. (He is luckier, of course, if the subject has chosen him.) Selecting a suitable subject should not be a haphazard process like rolling dice at random until the right combination pays off. As soon as the writer knows that he is faced with a research deadline—usually a comfortable number of weeks away—he should do some preliminary prowling in the library, along the open stacks if that is permitted, to see what, if anything, it contains within his spheres of general interest. If a teacher has restricted the choice to the limits of a single course, he should be on the alert for clues in the unfinished business of the required reading or class discussion. A good discussion in class is full of loose ends that need to be tied together or of questions that require more time and information to answer. A good teacher will always start more game than he can bring to earth; few mortals irritate him more than the student who, after weeks of classroom suggestions, both explicit and implicit ("This would make a good subject for a research paper") comes staggering toward the deadline still fumbling around for "something to write about."

The first rule for finding a subject is hallowed by age. Two thousand years ago the Roman poet Horace put it this way: "Choose a subject, ye who write, suited to your strength." This does not mean that a student should regard a research assignment only as another chance to ride a familiar hobby. It means that the beginner's reach should not so far exceed his grasp that he will quickly become bogged down in learned technicalities that defy translation.

The second rule is that even a subject well suited to the writer's taste and talent should be strictly limited in accordance with the proposed or required length of the paper. Overly ambitious intentions usually lead to unsuccessful research papers because the student cannot possibly treat his subject adequately within the allotted space and time.

The tentative choice of a subject may be nothing more than a general idea of the territory to be explored, but before the student has ventured far he should become aware of the boundaries so that he won't waste precious hours wandering off limits. Sometimes during the early stages of research a large, nebulous subject will rapdily assume a clearly defined shape, if only because of the limitations of a particular library. More often the reverse is true: a general topic divides and subdivides and the student, who thought he had focused on a subject, finds himself helplessly confused. It is best to limit the subject in advance and avoid this predicament, especially when there is a deadline to meet.

The problem of limiting a subject for research is no different in kind from the routine dilemma of channeling an ambitious idea into a short composition. The same writer who struggles to capture the significance of "Love" or "Ambition" or "The Beat Generation" in 500 words is just as likely to propose a research paper of 3,000 on "The Poetry of Robert Browning" or "The History of Television." Certainly "Browning's Dramatic Monologues" or "Educational Television" would be preferable. Making the necessary allowances for the experience of the writer and the resources of the library, "Browning's Dramatic Monologues on Renaissance Painters" or "Closed Circuit Television in the High School Science Class" would be even better. Nothing more quickly betrays the limitations of a writer's knowledge than his inability to limit his subject.

A more specific way of limiting is to begin with a definite *thesis*—a proposition to prove, perhaps even a side to defend in a hypothetical pro and con debate: to presume to show, for example, that Browning's failure to achieve success in the theater was largely the fault of the Victorian audience, or that classroom television costs more money than it's worth. Such a proposition gives direction to the research and provides a convenient mold for the paper. But the pre-fabricated thesis has caused many dangerous detours from the truth. When a writer has flown effortlessly to a conclusion, it is hard for him to persuade himself that he ought to go back and trudge over the land on foot. It is a human weakness, even among scholars, to warp the truth to accommodate a foregone conclusion, casually ignoring the stubborn facts that won't conform. Moreover, many useful subjects for research do not lend themselves to a thesis statement: they involve explanation, narrative, analysis, or revelation—but not necessarily proof. On the whole, unless a writer is already something of an expert on his subject at the start, he should postpone the choice of a thesis until he has done most of the digging.

He might, like a scientist, begin with a *working hypothesis,* a tentative proposition to serve as a guidepost. But he should always be careful not to mistake a hunch for a fact, or a prejudice for an opinion. Objectivity is at the heart of genuine scholarship. Any researcher would do well to remember Thomas Henry Huxley's definition of a tragedy: "the slaying of a beautiful hypothesis by an ugly fact."

Whatever the subject, there should be no misconceptions about the requirements of the job. Though no two subjects require identical treatment, *the final paper should make it clear that the writer has reflected on the material and marshaled it as evidence to support one or more convincing conclusions.* Many beginners honestly believe that research is only an exercise in genteel plagiarism: tracking down information and transferring it—in great chunks or little snippets—from print to typescript by way of hastily jotted notes—producing a result that could have been achieved more efficiently with a Gillette blade and a roll of Scotch tape. Many failing papers are little more than anthologies of unfamiliar quotations or patchwork quilts of paraphrase. To be sure, the novice is not required to aim at the goal of the ideal Ph.D. dissertation: "an original contribution to knowledge." He is not expected to be an authority on his subject and should not presume to be. Most of his material will have been carefully sifted by more experienced hands, but this does not exempt him from the duty of critical thinking. If he understands this from the start, he will not arbitrarily divide his labor into a physical act of compilation and a mental act of composition. From the first visit to the library he will be reflecting carefully upon the material, not just thoughtlessly jotting down notes. The final product will be a transfusion, not a series of transplants.

Using the Library

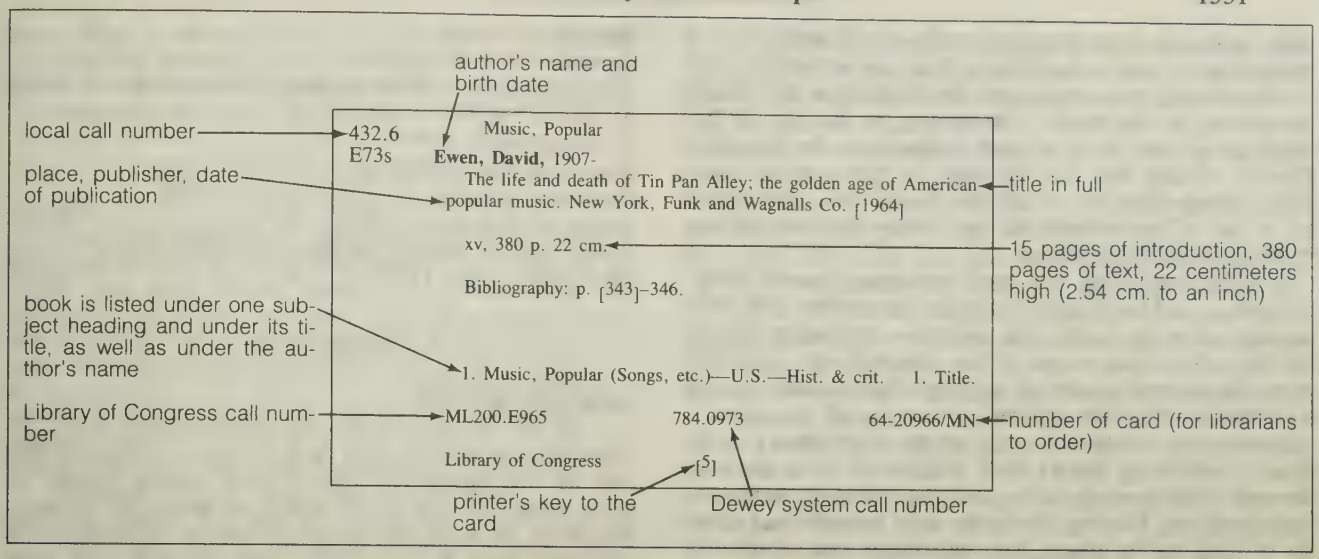
Because no two libraries are identical, no general instruction on "how to use the library" is custom-tailored to the individual in Azusa or Zanesville. The best way for a reader to get familiar with the machinery of a particular library is to make himself at home there. He should not stride directly to the delivery desk and say to whoever is in charge: "Do you have any books on closed circuit television?" Though the librarian—especially a trained reference librarian—may provide indispensable help at a later stage of the investigation, the student should begin with a declaration of independence. Given the run of the stacks in a small or middle-sized library, he can get off to a good start by going at once to the general territory of his subject (he can find *English Literature* or *American History* on a chart without memorizing the Dewey Decimal System). Wandering up and down the aisles from A to Z, he can get a preliminary view of the land by merely scanning the backbones of books.

But such freedom is not usually permitted in a large library, where the student may have to spend many minutes at the delivery desk waiting to receive the books he has requested. Moreover, a good research paper is not the end-product of aimless browsing. The student will save both himself and the librarian time and trouble by learning the names of the standard reference guides, where to find them, and how to use them. To do this is to practice one of the fundamental principles of research: *Always take pains in the present to avoid panic in the future.*

Regardless of the subject, three reference guides will probably prove indispensable: (1) the card catalogue; (2) a comprehensive encyclopedia: and (3) the *Reader's Guide to Periodical Literature.*

The Card Catalogue

The proper use of a card catalogue requires both imagination and persistence. (Serendipity—the ability to discover treasures that you are not looking for—is probably more of a reward for alertness and patience than a native gift.) In a complete catalogue any book in the library may be listed alphabetically on at least three cards:



by subject, author (last name first), and title. Other cards serve as cross-references.

For example, a student planning a paper on "Closed Circuit Television in the High School Science Class" might begin by looking up "Television." He should find a number of subject cards with this label at the top (probably typed in red), each alphabetically arranged by author. As he shuffles further, he should find other cards with more specific subject labels. "Television—apparatus and supplies" may interest him; "Television—law and legislation" may not. A group of books catalogued under "Television in education" certainly will. The student is on his way.

A single card, like a single dictionary entry, contains a wealth of information, some of which is essential for a bibliography. Consider the scope of the data on a typical subject card of the kind disseminated throughout the country by the Library of Congress (*above*).

A Comprehensive Encyclopedia

The reader digging for a research paper should ordinarily regard a complete encyclopedia as an indispensable guide, not an ultimate goal. The writer whose footnotes and bibliography show that he has quarried his material from a half dozen competing encyclopedias—however reputable—is easily identified as an explorer who has never left his safe home in the reference room.

For the conscientious student a good encyclopedia article has two main virtues: (1) it provides an authoritative and comprehensive view of a general subject, probably one in which he has staked out a more restricted claim; (2) it supplies bibliographical references which the student may not have discovered in the card catalogue. Let us take one possible example. The 1963 printing of the *Encyclopaedia Britannica* has an article on "Television" that runs to 19 large double-column pages, complete with photographs and diagrams. As the key to the contributors' initials reveals in the index volume, it is an authoritative article written by the Director of the Research Division of the Philco Corporation. But less than half a column is devoted to the applications of closed circuit TV in education. On the other hand, the article is followed by a list of six more extensive treatments of the general subject, any one of which might find a place in the student's final bibliography. Moreover, if the reader turns to "television" in the index volume, he will find other references to "educational television" that do not appear in the general entry. By consulting several good encyclopedias on a subject the student may choose one which he feels will best help him construct a firm foundation for a research paper.

The *Reader's Guide*

Neither the card catalogue nor the most complete encyclopedia can pretend to give a comprehensive listing of magazine articles that have not been corralled in a book. Even in these days of prolific publishing, many interesting subjects of limited appeal have never been fully treated in book form. New developments, especially in science, are arriving and changing with such speed that even an encyclopedia publishing an annual supplement can never be completely up-to-date. On almost any subject of general interest the first place to hunt for magazine articles is the *Reader's Guide to Periodical Literature*.

The *Reader's Guide* has been indexing current contributions to the best-known American magazines since 1901 and now includes references to more than 125 publications. The semi-monthly issues (monthly in July and August) are conveniently bound in volumes that cover periods of one to four years. Articles are listed by author and subject. If a student's chosen subject relates to a specific event since 1901 ("The Hamlet of John Barrymore," "The Attack on Pearl Harbor"), he can begin at that date and work toward the present. If not, especially if he has no clues to authors, he should start with the subject entries in the most recent issues and hunt backward through the bound volumes. On looking up "Television," for example, in the volume for March 1963–February 1964, he would find three articles listed under "TELEVISION, Closed circuit" and twenty-one under "TELEVISION in education." (Any abbreviations in the entries can be understood easily by referring to a key at the front of the volume.) And these would be only a selection of the articles for one year in popular magazines: a glance at the *Education Index* (see below) would uncover many more in professional journals. It is no wonder that teachers turn gray when students report that they "can't find any material" on an obvious subject in an adequate library.

The reader with limited time and facilities cannot expect to locate every one of these articles. It is one of the inevitable frustrations of research to find that the ar-

ticle with the most promising title of all appears in a periodical to which the library does not subscribe. The reader should not compound the frustration by vainly wandering in the stacks. On turning to the list of periodicals at the front of each volume in the *Reader's Guide*, he may find that the ones on the premises have been ticked off in ink. If not, he should have easy access to a list of periodicals in the library without riffling through the card catalogue.

After consulting the card catalogue, several encyclopedias, and the *Reader's Guide*, the student may have enough clues to books and articles—depending always on the subject and scope of his research—to keep him busy for several weeks of digging. No amateur can be expected to play the scholar's game by all the rules—traveling for months, or even years, from library to library, borrowing books and articles at long distance through interlibrary loans, examining others on photostats or microfilms, tracking down the most infinitesimal detail to its final hiding place. But any reader can vicariously experience the excitement of such sleuthing on a smaller scale. Even the beginner should be familiar with more than three guides to research. Some of these tools can prove indispensable to him for detecting clues to possible sources of information on his topic.

Of the unnumerable research tools in a great library—including reference guides to reference books and bibliographies of bibliography—the following list contains only a generous sample.

Catalogues and Bibliographies

Books in Print (1948–). An annual author and title index to the *Publisher's Trade List Annual*. Lists the books still available from more than 1,100 American publishers. *Subject Guide to Books in Print* (1957–) lists them annually by subject.

Library of Congress Catalog (1942–). A complete catalogue by authors, showing facsimiles of the cards in the great library in Washington, D.C. A similar catalogue arranges books by subject.

Periodical Indexes

General

Book Review Digest (1905–). A monthly collection of excerpts from current book reviews indexed by author, subject, and title. It helps the reader to get a quick general picture of whether the first greetings were favorable, unfavorable, or lukewarm. More important, it directs him to reviews that he may want to read *in toto*.

International Index to Periodicals (1907–). A key to articles in scholarly journals that are not indexed in the *Reader's Guide*, which is limited to more popular magazines.

New York Times Index (1913–). A detailed index (now published twice a month) to a distinguished newspaper. Indispensable for a writer whose subject is related to any newsworthy event since the year before World War I. Even if the library does not have the complete file of the *Times* (now available in microfilm), he can make extensive use of the index to pin down exact dates, establish the chronological order of events, and find leads to news in any paper that may be available.

Poole's Index to Periodical Literature (1802–1906). Though much less thorough than the *Reader's Guide*, this annual subject index is a useful key to articles in English and American magazines in the nineteenth century.

Special

Agricultural Index (1916–).
Applied Science and Technology Index (1858–).
Art Index (1929–).
Dramatic Index (1909–).
Education Index (1929–).
Essay and General Literature Index (1900–).
Industrial Arts Index (1913–1957).
Public Affairs Information Service (1915–).
Short Story Index (1953–).

Dictionaries

Language (general)

Of all reference books, the general reader should be most familiar with his own desk dictionary, which to him may be "the dictionary." But if he is writing a paper on some aspect of English or American usage, or trying to pin down an accurate or comprehensive definition of a particular term at a particular time, he will find more complete or specialized information in the following works:

Dictionary of American English on Historical Principles. 4 vols. Chicago, 1936–1944. Supplemented by *A Dictionary of Americanisms*, 1951.

New "Standard" Dictionary. rev. ed. New York, 1959. A revision of an unabridged dictionary published by Funk and Wagnalls since 1913.

Oxford English Dictionary. 12 vols. and supplement. London and New York, 1933. When a writer is summoning up remembrance of things past, few records are more suggestive than the changing history of a word's meaning through the years. The great OED supplies such a record by citing the use of words in passages of prose and poetry, arranged in chronological order from the earliest occurrences. Once published as the *New English Dictionary* (NED).

Webster's Third New International Dictionary. Springfield, Mass., 1961. "Webster's Third" contains many new words and meanings not included in the second edition of the 1934 and illustrates them profusely in actual contexts. Based on recent linguistic theory, it records—often without restrictive labels—many usages that are widely frowned on.

Language (special)

Evans, Bergen and Cornelia. *A Dictionary of Contemporary American Usage*. New York, 1957.

Fowler, H. W. *A Dictionary of Modern English Usage*. London, 1926.

Nicholson, Margaret. *A Dictionary of American-English Usage*. New York, 1957. Based on Fowler.

Roget's International Thesaurus. 3rd ed., New York, 1962.

Webster's Dictionary of Synonyms. Springfield, Mass., 1942.

Biography

Dictionary of American Biography. 20 vols. and supplements. New York, 1928– . The DAB contains lives of dead Americans.

Dictionary of National Biography. 22 vols. and supplements. London, 1885– . The DNB has lives of dead Britons.

International Who's Who. London, 1936– . Annual.

Kunitz, Stanley J. and Howard Haycraft. *Twentieth Century Authors*. New York, 1942. Supplement, 1945.

Webster's Biographical Dictionary. Springfield, Mass., 1943.

Who's Who. London, 1849– . An annual dictionary of living Britons.

Who's Who in America. Chicago, 1899– . A biennial dictionary of living Americans.

Encyclopedias and Surveys

General

There are many good, comprehensive encyclopedias which are following an editorial program of constant revision. Any good library should have several such encyclopedias of recent copyright. These encyclopedia publishers also supply yearbooks or supplemental material to make the most recent information promptly available to the researcher.

Yearbooks

In addition to the yearbooks made available by encyclopedia publishers, the following may be found useful.

American Year Book (1910–).
The New International Year Book (1907–).
Statesman's Year Book (1864–).
World Almanac and Book of Facts (1868–).

The Working Bibliography

At the very beginning of his search for materials the reader should be armed with a dependable pen and a supply of 3 x 5 index cards. (Pencils may smudge and encourage illegible scribbling; items jotted in notebooks or on miscellaneous scraps of paper are harder to organize and easier to overlook.) Though the search through the reference guides will turn up some material that will later prove unavailable or useless, it will pay at this stage to make a written record of every title that may conceivably bear on the chosen subject. When arranged in alphabetical form—with no more than one title on a card—these entries will form a tentative list of sources: a working bibliography. When the actual reading of sources begins, some of the cards will be jettisoned, and—as new references turn up in the reading—others will be added. The final bibliography, compiled after the paper is written, may have only a general family resemblance to its pioneering ancestor. But it is far less trouble to tear up a card that has not proved useful than to remember an unrecorded title or to return repeatedly to the reference guides.

To avoid trouble later on, the student should write down *the same facts in the same form* that will be required in the final bibliography. Authorities differ about the formal details, but if every researcher were permitted to follow his own fancy, whether through careless indif-

ference or conscious resistance to tradition, the useful shorthand of scholarship would soon degenerate into chaos. The forms illustrated here for both bibliography and footnotes (pp. 1024–1026) are those recommended in *The MLA Style Sheet* (revised edition), compiled by William Riley Parker for the Modern Language Association after consulting with the editors of 109 journals and 34 university presses. No prudent beginner would ignore such an expert jury to accommodate his own whims. Accurate scholarly form demands *the right facts in the right order with the right punctuation*. Though the standard may seem pedantic to the novice, even the substitution of a semicolon for a colon is not acceptable.

Here are some sample entries for bibliography cards.

For a book with one author:

Galbraith, John K. *The Affluent Society*. Boston, 1958.

Notice that the entry contains four parts in the following order: (1) Author's name, last name first—for alphabetizing; (2) full title—underlined (italicized); (3) place of publication; (4) date of publication. Periods separate the parts except for the comma between place and date. A period also comes at the end of the entry. Unless a different form of an author's name is well known (Eliot T. S. or Maugham, W. Somerset), give the first name and any initials. Nobody wants to search through a large catalogue for Brown, J.

Some authorities insist on including the name of the publisher. It comes after the place of publication and is preceded by a colon and followed by a comma:

Galbraith, John K. *The Affluent Society*. Boston: Houghton Mifflin, 1958.

For a book with more than one author:

Sledd, James H., and Gwin J. Kolb. *Dr. Johnson's Dictionary*. Chicago, 1955.

Because the second name does not determine the alphabetical placing of the entry, it follows the normal order. If a book has more than two authors, it is sufficient to give the name of the first and add "and others."

For a periodical article:

Lippmann, Walter. "Cuba and the Nuclear Risk," *Atlantic*, CCXI (February 1963), 55–58.

The standard form has five parts in this order: (1) Author's name, last name first (the title comes first if the author is not known); (2) full title of article—in quotes; (3) name of periodical—underlined (italicized); (4) volume—in Roman numerals—and date—in parentheses; (5) page numbers. Except for the period after the author's name, the parts are separated by commas. Notice that this form differs from that of the *Reader's Guide*, where the entry reads:

Cuba and the nuclear risk. Atlan 211:55–8 F '63.

Such an abbreviated form should not be copied onto bibliography cards.

For a newspaper article:

New York *Times*, December 28, 1964, p. 6.

The place of publication is not ordinarily underlined, and the page number is preceded by the standard abbreviation for *page* (lower case p.). If a newspaper has two or more sections with separate paging, the section number is included after the date:

New York *Times*, January 3, 1965, sec. 4, p. 7.

For an encyclopedia article:

Fink, Donald G. "Television," *Encyclopaedia Britannica* (1963), XXI, 910A–913.

In addition to this minimum of information, the student should allow room in the upper left-hand corner of the card for the call number. This will save unnecessary trips to the card catalogue. If the library is large and unfamiliar and the stacks are open, it is helpful to add a further note about the location:

613.84
N478s
(2nd floor,
north stack)

Neuberger, Maurine B. *Smoke Screen: Tobacco and the Public Welfare*. Englewood Cliffs, N.J., 1963.

Evaluating Sources

As soon as the student turns from the cards of his working bibliography to the actual pages of the sources, he can begin to evaluate the material. Often a quick glance at a book or article will assure him that it is not appropriate; the card, in this case, may be torn up at once. Though other sources will require more careful attention, the researcher should always be ready to change his reading pace, slowing down when the material is complicated or difficult, and speeding up when it is readily comprehensible. The independent reading for research will give him an incomparable opportunity to practice whatever he knows about the difference between skimming and thorough reading. Bacon's proverbial wisdom will become a practical reality: "Some books are to be tasted, others to be swallowed, and some few to be chewed and digested. . . ." "A man," said Samuel Johnson, "will turn over half a library to make one book." But not, the Doctor might have added, if the man plods through all the reading at the same unchanging pace.

Only a seasoned expert in a field can know for certain what authors to respect as authorities or disregard as quacks. But even the beginner can show some intelligent discrimination. The inexperienced reader can learn to evaluate sources just as the scholar does, by asking a few questions based on *external* and *internal evidence*. For example:

External Evidence

Who wrote the book or article? What's in a name? To a conscientious scholar, a great deal. If a name turns up again and again during the investigation—especially if others explicitly refer to the owner as an authority—it is a reasonable, though not a foolproof, assumption that he is more dependable than an obscure author. If the author has a pedigree in one or more standard biographical dictionaries, so much the better, though it must not be forgotten that the elect compile their own pedigrees. A Civil War historian in a great university probably knows more about the battle of Gettysburg than a feature writer commemorating the anniversary for a small town newspaper. A professional folklorist should have a more accurate knowledge of the history of the popular ballad than an itinerant guitar strummer.

Who published it? Though it is risky to make odious comparisons in the mushrooming world of publishing, a reader with some experience will be safer in trusting a reputable imprint of long standing than a new and untested brand name. A scholarly book published by a university press is probably a safer, if duller, guide to a specialized subject than a popular best-seller concocted for the trade. A sober account in the New York *Times* should be fitter to quote than a sensational exposé in a cheap tabloid.

When was it written? Is the material first-hand, second or third? A newspaper extra printed on December 8, 1941 might capture the confused excitement of the attack on Pearl Harbor, but an unbiased study published ten years later would probably be a more reliable source for the facts. An estimate of Winston Churchill published in 1919 would lack the perspective of a book written after the Battle of Britain. A student writing on a subject that is changing as swiftly as "Space Travel" or "Jet Propulsion" will naturally look for the latest word; a scholar delving into the past will be eager to uncover the earliest. The investigator with limited time and experience will lack the scholar's opportunities for tracking down a subject to its *primary sources*—burrowing beyond the printed page to the original manuscript. But he can share the scholar's desire for getting as near as possible to the first-hand truth of an event, the actual wording of a text or document. If he is writing about Shakespeare's treatment of the theme of mercy, he doesn't have to summarize a paraphrase of Portia's speech from a student cram book when a reputable text of *The Merchant of Venice* is close at hand. Nor should he quote a critic from the *Book Review Digest* when the original review is on a nearby shelf.

Internal Evidence

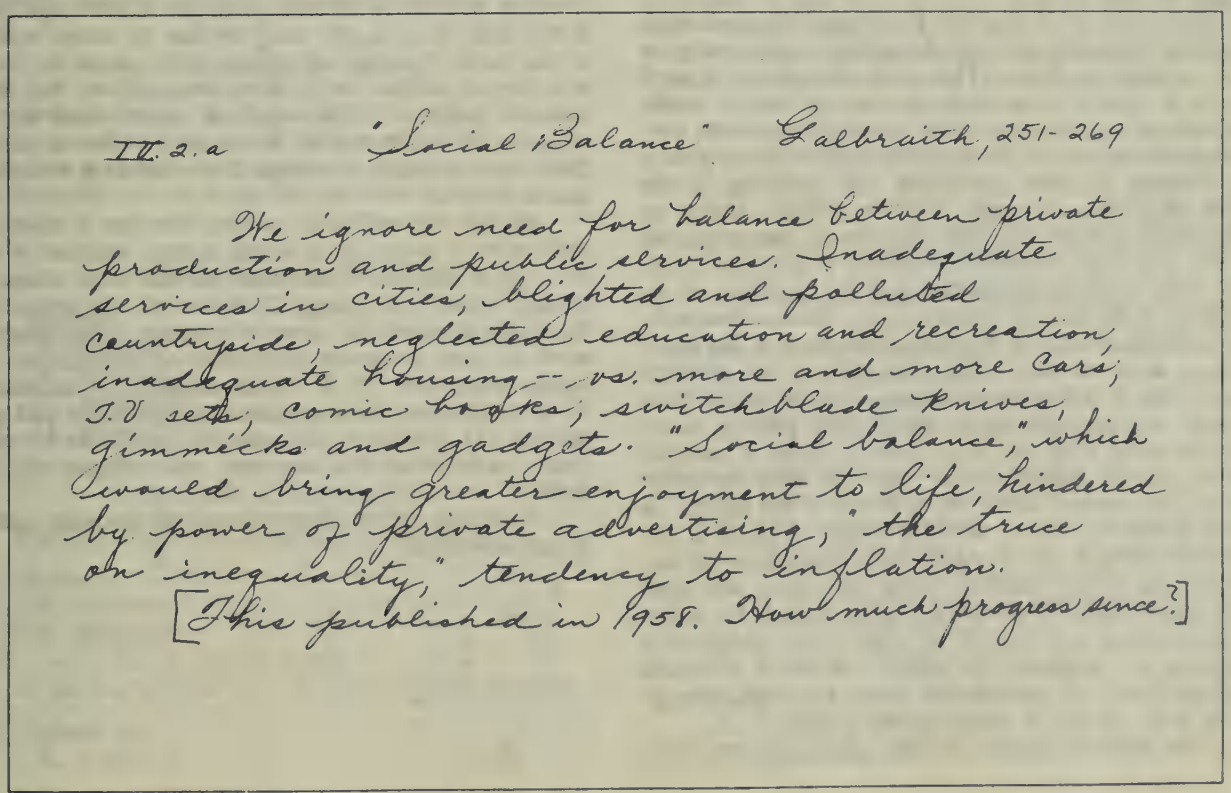
What does the actual text of the book or article reveal about the reliability of the author? The experienced reader will find it easier to answer such a question than the novices but it does not take much sophistication to distinguish between critical thinking and slanted writing (is the author's manner analytical or emotional, are the words neutral or loaded?); or between a distintersted search on all sides of the truth and an argument that is mere propaganda; or between a thorough investigation leading to conclusions founded on facts and a superficial survey resulting in unsupported conjectures.

Considering the amount of piffle on paper, no experienced reader has an ingenuous faith in the sanctity of print for its own sake. But many a reader who ought to know better, eager to accumulate evidence to support a thesis, will gather material at random without the slightest attention to the quality or reliability of his sources. The true scholar does not snap up ill-considered trifles; he is a discriminating reader and a natural skeptic. He not only wants to be shown, he insists on being convinced.

Taking Notes

It is sometimes convenient to jot down a general note about a book or article on one of the 3 x 5 bibliography cards. "A comprehensive survey with no recent evidence on the subject." "A jazzy sketch to amuse the reader, not inform him." But more specific or extensive notes should be on separate cards. Because they will not be shuffled in the same deck with the bibliography, these note cards need not be of the same size. Most scholars recommend 4 x 6 note cards (or slips of paper); some prefer half sheets (5½ x 8). Here convenience is more important than tradition. Note cards should be small enough to sort handily, large enough to allow room for legible notes, but not so large as to invite wholesale transcribing.

Note taking is a useful art, whether in routine reading, lectures, class discussions, or meetings of clubs and



committees. In research it assumes some of the dimensions of an exact science. The individual may eventually derive a personal method that suits him best. The following are some hints and warnings:

Do not take too many notes. Note-taking should be an aid to discriminating reading, not an opportunity for voluminous writing. The reader who postpones all his mental sorting until he begins to go through his note cards to write the paper is making his task unnecessarily difficult.

Restrict each note to one point on one side of the card. The definition of *point* is always arbitrary. It may be a sharp point like a brief direct quotation or a broad point like a short summary of a paragraph or a whole article. But do not clutter up a note with a miscellaneous scattering of quotations and reactions scribbled at random on both sides. The careful assignment of points to cards is another step in the winnowing process that accompanies research from start to finish. Organizing a research paper is not unlike playing a hand of bridge. If aces could not be quickly distinguished from deuces, or face-up cards from face-down, the game would be impossible.

Identify each card accurately at the top with a brief caption for the note and a key to the source, including the exact page number or numbers. If the complete information on that source appears as it should, on a bibliography card, all that is necessary on a note card is the author's name and the page—or, if he is responsible for more than one source, a short title: Muir, p. 61 or *The Present Age,* pp. 158–159. If a direct quotation extends from one page to another, carefully indicate the division with a slant line (/) at the appropriate point.

Taking notes with meticulous care. Note-taking is not jotting. Even when reading rapidly, come to a full stop at any important intersection. If necessary, look back and ahead to avoid the common distortion that comes from ripping a passage hastily out of its context. Remember that a careless glance may change *psychology* to *physiology,* and a single illegible word in a key quotation may later require an emergency trip to the library to revisit a book that somebody else has since withdrawn. Get it right the first time.

Take pains to distinguish between direct quotations and paraphrase and between the author's ideas and your own reactions to them. (The word *paraphrase* is used here in its general sense to mean any rewriting of another's material in your own words, whether it expands, contracts (summarizes), or keeps to the scale of the original.)

Nothing is more confusing and annoying to the reader of a research paper than the writer's failure to make these distinctions clear. Wholesale transgressions of this kind may represent conscious plagiarism. More often they result from ignorance of the meaning of research or of the rules of literary ethics. Because the problem sometimes arises at the writing stage, it is discussed in more detail on page 1024. But often a bad research paper—like a failing examination—can be traced back to poor or carelessly taken notes. Any passage taken word-for-word from the text, even a clause or unusual phrase, should appear in the notes in bold quotation marks. The student who "forgot to put in the quotes" is either dishonest, naive, or inexcusably careless. If the note-taker temporarily abandons direct quotations for paraphrase, he should carefully close the quotes and open them again when the paraphrase is finished. If he makes an independent comment of his own in the middle of a quotation or paraphrase, he should enclose it in square brackets [thus], not parentheses (thus). He might even go so far as to identify it with his own initials.

Take particular pains to copy quotations precisely. Any scholar will quote much more than he finally uses, but even at the note-taking stage, it is wise to limit direct quotations to short passages *precisely* transcribed. Precisely means word for word, spelling for spelling (except for obvious typographical errors), punctuation mark for punctuation mark. Any omission from a quotation should be carefully identified with three spaced periods (. . .) followed by the period at the end of the sentence where appropriate. Every theater-lover is familiar with the way a press agent can play fast and loose with a critic's review. The reviewer may write: "My final judgment is that, except for the acting, the play is brilliant." With the dots carefully omitted, the advertisement reads: "My final judgment is that the play is brilliant." The scholar's rule is not pedantry, but simple honesty.

Examine each of the sample note cards carefully. The first note, conceivably for a paper on "The Economics of American Poverty," presents a brief summary of an entire chapter in John Kenneth Galbraith's *The Affluent Society.* (The code number in the upper left-hand corner has presumably been supplied later when the cards were organized to match an outline for the paper.) Because the phrases "Social Balance" and "the truce on inequality" are, at least in this context, Galbraith's own, they are put in quotation marks. The reader's reaction is carefully segregated in square brackets.

A passage of direct quotation has been sandwiched between two short pieces of paraphrase in the second note. Notice the slant line marking the transition from page 258 to 259, the parentheses (Galbraith's, not the note-taker's), the line under *minimum* to represent Galbraith's italics, and the three spaced periods to mark an omission from the quotation. Were the omission at the end of a sentence, a fourth spaced period would follow (. . . .).

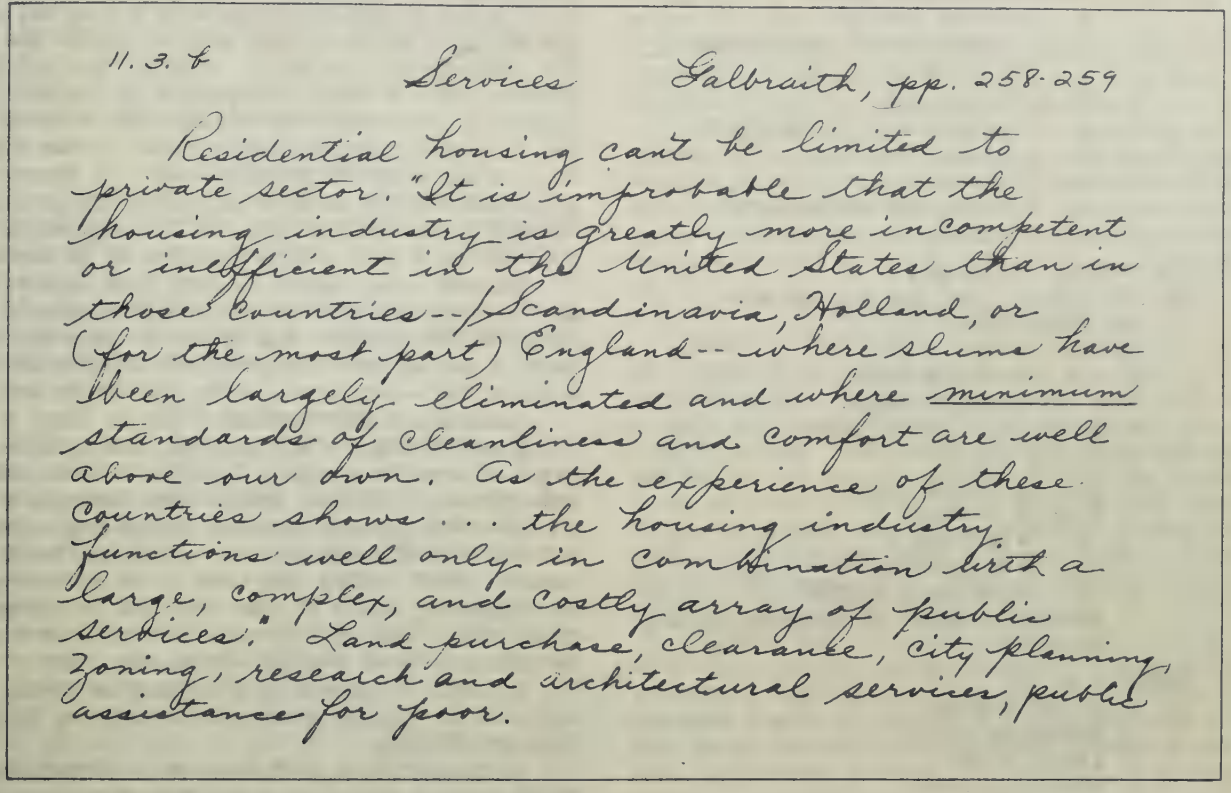
The Outline

When a student has made the last of his notes and carefully read them all through to get a bird's eye view of the land, he is finally ready to plan the actual writing of the paper. Teachers of writing differ about the value of a formal outline for a short composition, but for a research paper of 2,000 words or more, some sort of blueprint is indispensable. Even the liveliest argument can't move ahead in a straight line without a well-articulated skeleton.

Though the traditional outline form can at times become a strait jacket for a writer, it has a number of virtues: (1) It tells the writer where he has been, where he is, and where he is going; (2) It reminds the writer that the reader demands the same information, suggesting the need for topic sentences (expressed or implied) and adequate transitions; (3) It avoids unnecessary repetition; (4) It emphasizes the importance of symmetry and proportion; (5) It requires the writer to coordinate his main points, subordinate his subpoints, and relegate trivia to limbo.

A formal outline should follow the accepted method of subordination:

I.
  A.
    1.
    2.
      a.
      b.
  B.



The writer should use either a *topic outline* (limited to words or phrases) or a *sentence outline* (with complete sentences). According to strict rule, the two types should not be mixed. The sentence outline has the advantage of requiring specific assertions (which may turn into topic sentences) instead of ambiguous catchall topics. But with many kinds of material, sustaining a sentence outline is an artificial struggle.

Common errors in outlining should be strictly avoided; examples of these are given below.

The meaningless category

"Introduction," "Body," and "Conclusion," for example, are often too general to be useful. Oftentimes a writer can do better by ignoring the introduction entirely and plunging his pen right into the body.

Illogical coordination

I. Athletics
   A. Football
   B. Baseball
   C. Basketball
   D. Team sports

Improper subordination

Placing a topic under the wrong heading:

I. Athletics
   A. Football
   B. Baseball
      1. Good sportsmanship

Or putting a main point in a subordinate position:

I. School life
   A. Athletics
      1. Major sports
      2. Minor sports
   B. Classroom activities
      1. Discussion
      2. Learning

Single subdivision

If *I* is divided at all, it should have at least two subheads, A and B. If A is divided, it should have at least two subheads, 1 and 2. And so forth. The temptation to use a single subhead can be resisted by following a heading with a colon and a qualifying phrase. A. Athletics: a cause of student failure.

Here is a topic outline displaying the organization of this article: (Because details can be tucked in place as the writing progresses, a practical working outline might be simpler than this. The small bones are supplied here to help the reader in studying and reviewing the article.)

Writing the Paper

Except for the greater complexity of organization and the special problems of quotation, paraphrase, and proper acknowledgment, "writing up" the results of research is not essentially different from writing any other kind of paper. Whatever laws govern grammar and diction, spelling and punctuation, sentence and paragraph structure, none of them is suspended for research. The freedom to experiment with language may be more limited; the premium on clarity and accuracy is even higher. There is less room for the infinite riches of rhetoric: the drama and poetry of narrative and description are usually replaced by the humbler virtues of clear exposition. But good writing is good writing regardless of its habitat.

Illusions about research die hard. Even students who are convinced that the paper should be composed, not compiled, often assume that the art of composition requires a special style—freighted with *Academese*—and a special tone—impersonal, stuffy, and deadly dull.

Academese is only one kind of jargon. There is also *Pedagese*, the jargon of educationists, and *Scientese*, the jargon of would-be scientists, *Legalese*, *Commercialese*, and *Officialese*. All these dialects share the traits of jargon: involved sentence structure; unnecessary repetition and interminable circumlocution; a pseudotechnical vocabulary. Such writing has been called *gobbledygook* or—suggesting that it is often contrived to impress or even confuse—*bafflegab*. It might be better to revive the old-fashioned word *crabbed*—pronounced slowly with two syllables. A crabbed style suggests an animal that can move its imposing armaments forward only by slow, sideways slithering.

An expert talking to other experts will inevitably use the technical terms of his trade. Nobody writing on a technical subject, whether the propulsion of a rocket or the scansion of a poem, can entirely avoid technical language. But the problem is to explain it, not exploit it, to understand it, not merely parrot it. Genuine technical language is concise, concrete, and clear; it serves to identify and limit a phenomenon—a *paramecium*, not a *wiggly beasty, iambic pentameter*, not *words with a regular beat*. Pseudotechnical language is pulpy, abstract, and cryptic—*the intellectual confrontation in an interpersonal situation* instead of *the meeting of human minds*. The proliferation of such jargon by scholars does not make it scholarly.

The style and tone appropriate to a research paper will vary, of course, with the subject, the writer, and the intended reader. A style can be formal without being involved, or informal without being casual and careless. For the general writer who does not pretend to expert knowledge, the best advice on style is simply this: Relax but don't be lax; say simple things simply in your own language; do not write anything, even a quotation or a borrowed idea, in words that you do not understand yourself; be as concrete as possible; remember that, of all the virtues of good writing, the greatest is *clarity*.

The tone of a research paper can be serious without solemnity, dignified without stuffiness. The goal is not a charming personal essay; the reader is presumably interested in the subject, not the personality of the middle man. But the studied effort to be impersonal—and therefore ostensibly disinterested—often results in writing without either personality or interest. Though practice varies, it is better for a writer to use the first person, *I*, than to get tangled in the circumlocutions—the passive voice, for example—of the impersonal manner. Humor and irony may be useful if they grow naturally out of the subject instead of being thrust upon it. Irrelevant wisecracking is taboo. Jokes will not improve stale prose. The essential rule for tone is that all good writing more nearly reflects the living sound of a human voice, than the metallic chatter of a computer.

Quotation and Paraphrase Revisited

One special writing problem—anticipated in the discussion of note-taking—requires expansion here: the proper use of quotation and paraphrase. Make a careful comparison of the following samples:

(1) Short quotation

Leo Stein once said this about composition: "Every personal letter one writes, every personal statement one makes, may be creative writing if one's interest is to make it such."

(A short quotation in a research paper, as in any other paper, is introduced by a colon, or a comma, and carefully enclosed in quotation marks.)

(2) Long quotation

Talking about how to teach the proper use of language, Leo Stein said:

> There is no difficulty in teaching them the routine of expression . . . but it is good to make them realize that there is no essential difference between them and those who write, except interest, use and purpose—that creativity in writing means nothing more than fitting words accurately and specifically to what one specifically and accurately intends. Shakespeare certainly intended more than most and had exceptional gifts, but anyone who has anything to say and wants to interest the receiver has a like object. Every personal letter one writes, every personal statement one makes, may be creative writing if one's interest is to make it such. Most people do not have this interest; what they write in ordinary communications is as dull as they can make it. They have never been taught to think of all writing as in its degree *writing* and all speaking *speaking*, and so they write in rubber stamps [clichés] and speak in the current routine of slang, as though writing and speaking were something reserved for the elect.

(Because the quotation is long—meaning, according to a common rule, five lines or more of typescript—it is set off in a separate paragraph, indented, and typed single-space without quotation marks. The student has represented Stein's italics (*writing, speaking*) by underlining. The three spaced periods in the first sentence stand for a deletion by the writer of the paper, and the bracketed word [clichés] in his addition.)

(3) Partial paraphase

Leo Stein maintains that creative writing is "nothing more than fitting words accurately and specifically to what one specifically and accurately intends." That Shakespeare had greater intentions and gifts does not, he insists, alter the rule. "Every personal letter one writers, every personal statement one makes, may be creative writing if one's interest is to make it such." A person who has no interest in writing or speaking, who mistakenly assumes that they are "reserved for the elect," will inevitably settle for dullness couched in clichés.

(To compress Stein's passage while preserving some of the original flavor, the writer of the paper uses an acceptable blend of paraphrase and direct quotation. Restricting the paraphrase to his own words and carefully setting off Stein's exact words in quotation marks, he weaves the two into a single tapestry.)

(4) Complete paraphrase

Leo Stein argues that creativity is not a special gift awarded to writers and speakers and denied to ordinary mortals. If he has something to say and is interested in saying it well, anyone, even in a personal letter, can be a creative writer.

(The summary, entirely in the student's own words, reproduces Stein's essential meaning but loses some of the flavor. It has the advantage of brevity.)

All four techniques are acceptable, depending on the purpose and scope of the paper. One *unacceptable* technique is far too common: a confusing mixture of the words of the source and the words of the student without proper distinction between them. It has been called *half-baked paraphrase*.

(5) Half-baked paraphrase

Stein says that students ought to be taught that people in general just don't bother to take advantage of their creativity, which only means in writing fitting words accurately and specifically to what one specifically and accurately intends. Shakespeare intended more than most and had exceptional gifts, but anyone who has anything to say and wants to interest the receiver has a like object. People in general are dull with words because they couldn't care less. They don't bother to think of all writing as in its degree writing and all speaking speaking, and so they use rubber stamps and slang.

(Though they are mixed clumsily with some comment of his own, the student has appropriated appreciable amounts of Stein's own wording without identifying it in quotation marks. A footnote or a bibliographical entry does not excuse this common practice. Whether it results from carelessness, laziness, or dishonesty, it is plagiarism.)

To quote or not to quote? No sacred formula answers the question. A historian working with original documents will resort to frequent quotation. A literary scholar cannot adequately analyze the work of a poet without reproducing excerpts from the poems, line by line, exactly as they appear in the original. But many inexperienced students quote too much: their research papers are merely collections of quotes loosely tethered by incidental interruptions. Generally speaking, direct quotation is useful to clinch an important point, to preserve some of the authentic flavor of the source, or to reproduce a passage that is particularly well written or peculiarly inept. A student should never quote at length unless the passage is especially important for his purpose.

Footnotes

Footnotes should be carefully supplied during the writing process, not superimposed later as an afterthought. In the first draft they can be included temporarily in the text itself. Even in the final draft, short notes may be conveniently inserted in the text in parentheses (*Hamlet* III, ii. 61–64) if the source is clearly identified and they do not clutter up the page with too many interruptions. Otherwise, footnotes are usually placed at the bottom of the page, not at the end of the paper. They are keyed to the text with Arabic numerals—not asterisks or other symbols—and should be numbered consecutively throughout the paper. The number in the text should be raised slightly above the line, and placed after any mark of punctuation and at the end—not the beginning—of any quotation, long or short. The number should not be enclosed in parentheses or followed by a period, either in the text or at the bottom of the page. At the foot of the page each note should begin with a capital letter on a new line—with the number raised and indented—and end with a period.

Occasionally a footnote is useful to supply an interesting detail or incidental comment that does not fit conveniently into the text. But in a research paper most footnotes are supplied to acknowledge specific borrowings from sources. Unlike the bibliography, which is a general listing of sources, they usually provide exact page references. With that exception, a complete footnote furnishes the same essential information as a bibliographical entry, but with a different system of punctuation and in a slightly different order.

A footnote is always used to acknowledge a direct quotation unless its exact source is made clear in the text or is familiar (like the Gettysburg Address) to any educated reader. But in spite of a common illusion, the student's responsibility does not end there. He should also use a footnote (1) to acknowledge the use of another writer's idea or opinion *even if it is completely paraphrased,* and (2) as a receipt for the loan of any facts, statistics, or other illustrative material that he has not acquired by original observation.

Here is a representative group of complete footnotes: (Compare them with the bibliographical entries on page 7, observing the differences in punctuation and order of their parts.)

For a book with one author:

[1]John K. Galbraith, *The Affluent Society* (Boston, 1958), p. 23.

For a book with more than one author:

[2]James H. Sledd and Gwin J. Kolb, *Dr. Johnson's Dictionary* (Chicago, 1955), pp. 49–50.

For a periodical article:

[3]Walter Lippman, "Cuba and the Nuclear Risk," *Atlantic,* CCXI (February 1963), 57.

For a newspaper article:

[4]New York *Times,* December 28, 1964, p. 6.

[4]New York *Times,* January 3, 1965, sec. 4, p. 7.

For an encyclopedia article:

[5]Donald G. Fink, "Television," *Encyclopaedia Britannica* (1963), XXI, 912.

Whenever a source is used for the first time, the student should give a complete footnote even though most of the information will be repeated in the bibliography. If, however, some of the details appear in the text—the author's name, for example, or the title—it is unnecessary to repeat them at the foot of the page. After the first footnote, an abbreviated form may be used if the complete note is not buried too far back. The easiest short form is the author's last name:

[6]Galbraith, p. 29.

If previous notes refer to more than one work by the same author, a shortened title should be added:

[7]Galbraith, *Affluent Society,* p. 29.

The popularity of the following Latin abbreviations is on the wane, partly because they have led to widespread misunderstanding. Though the writer may never be required to use them, he should understand their meaning in the footnotes of others: (They are sometimes italicized because of their foreign origin.)

Ibid.	short for *ibidem,* meaning "in the same place." Refers to the same page of the same source cited in the footnote *immediately preceding.*
Ibid., p. 57.	another page of the same source cited in the footnote *immediately preceding.*
Galbraith, *op. cit.,* p. 59.	short for *opere citato,* meaning "in the work cited." Refers here to page 59 of the opus by Galbraith cited in a recent footnote. Obviously has no advantage over the use of the author's name alone or author and short title.
Op. cit., p. 59.	may be used if the author's name is made clear in the text.
Loc. cit.	short for *loco citato,* meaning "in the place cited"—that is, the same passage as in a recent footnote. Never used with a page number. Not used at all by many modern scholars.

Because documentation is intended to help the reader, not impress or confuse him, discretion is the better part of valor. If, for example, a number of short quotations from the same source appear in one paragraph of the paper, or if the writer is indebted to one authority for a tissue of small facts, it is unnecessary to present the reader with a whole flock of ibids. On occasion a single covering note may be sufficient:

[1]My main authority for the facts about the charge of the Light Brigade is Cecil Woodham-Smith, *The Reason Why* (New York, 1953), pp. 207–257.

As Frank Sullivan once observed, if you give a footnote an inch it will take a foot.

The student may find the following abbreviations useful in either footnotes or bibliography:

Abbreviations Commonly Used in Footnotes and Bibliographies

anon.—anonymous

c. or ca.—from Latin *circa,* meaning "about." Used with approximate dates (c. 1340).

cf.—compare (cf. p. 47). Should not be used interchangeably with *see* (see p. 79).
